Preface

In India, a stated objective of economic policy planning is achievement of high rates of growth of the economy and sustained improvement in the standards of living of people. A rapid growth in employment opportunities for all sections of the society, associated with rising GDP growth is essential to realize this objective as also to achieve the goal of Inclusive Growth. However, despite impressive economic growth over the years, the situation on employment front leaves much to be desired.

Growing integration of our economy with the global economy has increased the susceptibility of the economy to the vagaries of global economic forces. Recent global recession adversely affected Indian economy and hence the employment scenario in the country as well. Substantiation of such observations calls for availability of reliable data on the 'current' employment-unemployment situation of the country. This underscores the importance of having a mechanism in place to assess the employment-unemployment situation at frequent intervals. Availability of data at frequent intervals is crucial to monitor the dynamics of growth and employment as also to assess the impact of economic events such as recession on employment. The findings of surveys on the extent and nature of unemployment is of immense use to policy makers and planners to identify the sectors and subsectors which call for interventions to improve the employment situation in the country.

In this background, the task of conducting such a survey on employment-unemployment was entrusted to the Labour Bureau by the Ministry of Labour & Employment, Government of India. The present Employment-Unemployment survey is the first such Household survey undertaken by the Bureau at the National level. The survey was undertaken across 28 States and UTs of the country.

The report offers an assessment of the employment-unemployment situation experienced by the economy over the years, defines the various concepts and terminologies used in the survey, provides a range of demographic particulars of the population and significantly provides various labour force estimates at state and overall level which have enormous relevance. Various parameters of employment by types of enterprise and working conditions of labour force have also been reported based on the survey results.

Labour Bureau conveys its sincere thanks to the Secretary, Ministry of Labour & Employment, Government of India for entrusting the task of conducting the Survey. The Bureau is also thankful to the Labour & Employment Adviser and the Deputy Director General in the ESA division of the Ministry in guiding us at every stage of the survey. We are indeed grateful to the Group of Experts, comprising of the officers of the Central Statistical Organisation, the National Sample Survey Organisation, the Directorate General of Employment & Training and the Ministry of Labour & Employment, for providing their expert guidance in the finalization of the Questionnaires, Sampling Design and the Estimation Procedure adopted in the survey. My sincere thanks are also due to the National Sample Survey Organisation including its Zonal, regional and sub regional offices for making available the Urban Frame Survey maps. I am also grateful to the State/UT Directorates of Economics & Statistics for their whole hearted support and cooperation extended in collection of data and its supervision.

The report is a product of exemplary team work carried out in the Bureau during the last six months. My appreciation for hard work rendered goes to all the Investigators, Economic Officers, Statistical Officers and the senior officers of the Bureau who have been part of this team. I am confident that the findings of the survey would prove to be highly useful to all stakeholders.

Chandigarh **B.N. NANDA**
29th October 2010 **DIRECTOR GENERAL**

Executive Summary

1. The present Employment-Unemployment survey is the first such household survey conducted by the Labour Bureau.
2. The survey has been conducted in 28 States/UTs spread across the country in which about 99 per cent of the country's population reside.
3. A multi stage stratified systematic sampling technique has been adopted for the survey. In each State, districts have been divided into four strata based on the population of the district.
4. The four strata formed include: i) districts having more than 50 lakh populations, ii) 25-50 lakh population, iii) 10-25 lakh population and (iv) less than 10 lakh population.
5. From the 28 States/UTs surveyed, 300 districts were selected for coverage under the survey.
6. From each selected district, sixteen second stage units, i.e, villages in case of rural areas and urban blocks in case of urban areas have been selected.
7. The survey has been conducted during the period 01-04-2010 to 15-08-2010. Information through the survey has been collected for the fixed reference period of financial year 2009-10 (i.e. 1-04-2009 to 31-03-2010).
8. Under the survey, 45,859 household schedules have been canvassed of which 24,653 are rural and 21,206 are urban household schedules. A total of 2,33,410 persons have been interviewed to gather information from 45,859 households.
9. Various Employment-Unemployment estimates in the survey are derived on the basis of usual principal status approach only.
10. The survey results are shown in proportions (per thousand persons) for the States/UTs surveyed. At the Overall level of the States/U.Ts

surveyed, absolute estimates are also derived in addition to the proportion estimates.

11. The 28 States/UTs surveyed are estimated to have 238 million households, of which 172 million are rural and 66 million are urban.
12. The household size is estimated at 5.0 at overall level, while it is 5.1 in the rural sector and 4.7 in the urban sector.
13. In the 28 States/UTs surveyed, population is estimated at 1182 million with 63.5 per cent population in the working class age of 15-59 years.
14. In the rural sector at overall level, population is estimated to be 872 million, which is 74 per cent of the total estimated population in the States/U.T's surveyed.
15. The sex ratio (no. of females per 1000 males) is estimated at 917 for the rural and urban sectors combined, with 915 in the rural areas and 924 in the urban areas.
16. The literacy rate for the population of age group 7 years & above is estimated to be 77.7 per cent at the overall level, with 74.6 per cent in rural areas and 86.0 per cent in urban areas.
17. In case of male and female population of age group 7 years & above, the literacy rate is estimated to be 85.0 per cent and 69.7 per cent respectively at the overall level.
18. The worker population ratio is estimated at 325 persons per 1000 population at the overall level. In the working age population (i.e. 15-59 years of age), the worker population ratio is 465.
19. In the rural areas, the worker population ratio is estimated at 329 persons per 1000 population.
20. The worker population ratio in case of female members is 140 females employed per 1000 female persons at the overall level.
21. The sex ratio of the employed persons reveals that, 259 females are employed per 1000 employed males at the overall level. In the rural and urban areas, the sex ratio of the employed persons is estimated at 278 and 204 respectively.

22. The labour force participation rate is estimated to be 359 persons out of 1000 persons in the labour force at the overall level. In the rural and urban sectors, it is 365 and 340 respectively.
23. The sex ratio of the labour force shows that there are 279 females per 1000 males in the labour force at overall level. In the rural and urban sector, the sex ratio in the labour force is 299 and 222 respectively.
24. The unemployment rate is estimated at 94 persons out of 1000 persons in the labour force, which implies that 9.4 per cent of the labour force is unemployed at the overall level as per the usual principal status.
25. In the rural sector, the unemployment rate is estimated at 101 persons out of 1000 persons in the labour force. Similarly in the urban areas, the unemployment rate is 73 persons out of 1000 persons in the labour force.
26. Among females, the unemployment rate is 146 out of 1000 females in the labour force at the overall level, whereas for male members the same is 80 per thousand males.
27. The proportion unemployed is the number of unemployed persons per thousand population. At the overall level, the proportion unemployed is estimated at 34 persons per 1000 population. While for male members, it is 43 and for females, it is 24 per 1000.
28. In the working age population (i.e. 15-59 years of age), the proportion unemployed is 49 persons per 1000 persons.
29. In rural areas, the proportion unemployed is estimated at 37 persons per 1000 population in these areas. Similarly, in urban areas, the proportion unemployed is 25 persons per 1000 population in these areas.
30. Within the employed population, self employment is the dominant category. Out of 1000 persons employed, 439 persons are self employed, 168 persons are regular wage/salaried and the rest 393 persons are employed as casual labour at the overall level.

31. In the rural sector, 457 persons and 435 persons out of 1000 persons are in the categories of self employed and casual labour respectively. Rest 108 employed persons belong to regular wage/salaried class in the rural areas.
32. The survey results of the employed population are further classified into nine broad industrial groups based on the activity undertaken by the employed person in the reference period.
33. The survey results reveal that 455 persons out of 1000 persons employed are employed in agriculture, forestry and fisheries group at the overall level, followed by 89 persons in the manufacturing group, 88 persons in the wholesale & retail trade, etc, 84 persons in the community services group and 75 in the construction group of industries.
34. In the rural sector, 576 persons out of 1000 persons employed are engaged in the agriculture, forestry & fisheries group, followed by 72 persons in the construction group and 67 persons in the manufacturing group of industries.
35. In the urban sector, a maximum 173 persons out of 1000 persons are employed in the wholesale & retail trade group followed by 154 persons in the manufacturing and 146 in the community services group.
36. Among the self employed persons, majority of them are employed in agriculture, forestry & fisheries group (572 persons out of 1000 persons) followed by 135 persons in the wholesale & retail trade group at the overall level.
37. In the rural sector, 694 persons out of 1000 self employed persons are engaged in the agriculture, forestry & fisheries group at the overall level.
38. In the urban sector, out of 1000 self employed persons, 299 persons are employed in wholesale retail trade group followed by 173 persons in the manufacturing group at overall level.

39. In case of regular wage/salaried persons, 227 persons per 1000 persons in this category are employed in the community services group followed by 153 persons in the manufacturing group at the overall level.
40. In case of casual labour category of persons, 467 persons per 1000 persons in this category are engaged in agriculture, forestry & fisheries group followed by 148 persons in the construction group at overall level.
41. The survey results also reveal the type of enterprises in which the employed persons worked during the reference period. It is observed that out of 1000 persons employed, 494 persons are employed in the proprietary type of enterprises followed by 100 in the public/private limited companies.
42. The employed persons are also classified on the basis of total number of workers in the enterprises in which the person is employed during the reference period. The survey results reveal that 658 persons out of 1000 persons employed, in the enterprises having less than 10 workers.
43. During the survey, capturing the nature of the enterprise, like perennial, seasonal or ad-hoc, in which the person is employed is also attempted. The survey results show that 436 persons out of 1000 persons are either employed in seasonal or ad-hoc type of enterprises at the overall level.
44. The survey result indicate that out of 1000 persons, 157 persons are either getting or are eligible for paid leave in the establishment in which they are employed at the overall level.
45. A maximum of 443 persons out of 1000 persons in community services group are getting paid leave. On the other hand, in agriculture, forestry & fisheries group, a minimum of 54 persons out of 1000 persons have reported payment of paid leave by the employer.
46. In case of other social security benefits such as the provident fund, gratuity, health care & maternity benefits, pension etc, 163 persons out

of 1000 persons have reported the provision of any one of the above benefits in the unit, in which they are employed at the overall level.

47. In community services group, a maximum of 400 persons out of 1000 persons are reported having access to any one of the social security benefits.

CHAPTER I

INTRODUCTION

BACKGROUND

The twin objectives of ensuring economic growth with equity and social justice have guided India's strategies for planned economic development since independence. The initial Five Year Plans, however, focused essentially on realizing a high rate of growth while poverty alleviation through generation of employment opportunities was viewed as a natural outcome of this development process. The so-called trickledown theory, an acronym for the mechanism of economic processes through which the benefits of growth percolate down to the lowest rungs of the social classes and groups, was thought by planners to adequately address the problem of high unemployment and poverty in the country. Overtime, however, it was realized that these economic processes were too slow and uneven and hence incapable of solving the problem of unemployment and poverty itself despite the economy registering economic growth. Economic growth itself was moderate and shied away from the steady state growth path due to many reasons and tended to hover around a low equilibrium growth rate of 3.5 percent dubbed by some economists as the "Hindu Rate of Growth". This was thought to be far short of the rate which could make a tangible dent on the massive problem of unemployment and hence poverty in the country.

STRUCTURE OF THE ECONOMY

In addition, another major challenge before a viable employment strategy was posed by the structure of the economy and the work force. Historically, Indian economy has been characterized as agrarian economy with a small

manufacturing sector and hence an overwhelming share of agricultural employment in the total work force. This share remained static over a long period despite the fact that the structure of the GDP underwent a transformation resulting in the share of agriculture in GDP declining consistently over the years. Combined with the limited growth of the manufacturing and services sectors and preference for a capital intensive technology by the organised manufacturing sector, the opportunities for generation of productive employment could not get expanded beyond a point. Despite a near 'Zero' employment elasticity in the agriculture sector, additions to the labour force (surplus labour) had to wily nilly fall back on this sector thereby swelling the ranks of the disguised unemployed and the underemployed. These processes resulted in low productivity and low income levels of the agricultural labourers. Doubts were also expressed on the employability of the labour force in the organised sector due to lack of appropriate skills necessary for their productive absorption in value added sub-sectors of manufacturing and services sector.

INTERVENTIONS

The critical and emergent nature of the problems of unemployment and poverty called for state interventions to create employment generation through a host of policy planning initiatives. Economic policies were re-designed for which the mandate was spelt out in unambiguous terms in the Five Year Plans. It was during the Fifth Five Year Plan that removal of unemployment and poverty alleviation was spelt out as one of the principal objectives of economic planning in the country. The seventies, eighties and the nineties saw emergence of special schemes in the rural development sector such as IRDP, NREP, RLEGP, JRY etc. to tackle the problem of unemployment and poverty through employment generation and asset creation. As a result, the seventies and eighties witnessed steady increase in employment generation, though the rate of growth of employment continued to somewhat lag behind that of the growth of the labour force all along.

With the launching of the economic reforms during the year 1991 and subsequent removal of trade restrictions and other economic controls, it was widely believed that this would result in expansion of the economy, higher output growth and hence creation of new employment opportunities which will lead to a fall in the level of poverty and inequality. The economy has indeed experienced high rates of growth in the post reforms period. The optimism on employment creation, however, has not been realized to the fullest extent. The jury is still out on the beneficial effects of this economic growth on growth of employment. A minority holds an extreme view that post reforms period in recent times has witnessed 'jobless' growth. Evidence however suggests that employment generation has at best absorbed additions to the labour force without making a tangible dent on the backlog of the unemployed. Post reforms period has also witnessed decelerating trend in the employment elasticity in certain sectors. There are, however, a few sectors where the employment elasticity has not decreased viz, the Construction sector and certain tertiary activities like tourism, trade etc. Evidence however suggests that the Indian economy has witnessed a tendency towards casualization of labour.

EMPLOYMENT - UNEMPLOYMENT

Considering the present employment – unemployment scenario in the country, the Eleventh Five Year Plan strategizes rapid growth in employment opportunities along with improvement in the quality of employment. It recognizes the need to increase the share of regular employment in total employment and a corresponding reduction in casual employment. The employment generation strategy of the Eleventh Five Year Plan has also envisaged reduction in underemployment and a movement of surplus low wage labour in agriculture sector to higher wage and more gainful employment in the non-agricultural sector. Agriculture sector is projected to generate no

additional employment during the Eleventh Plan period. Employment in manufacturing is however expected to grow at 4 per cent while construction and transport & communication are expected to grow at around 8.2 per cent and 7.6 per cent, respectively. The projected increase in total labour force during 11th Plan is 45 million. As against this, 58 million employment opportunities are targeted to be created during the Eleventh Plan. This is expected to reduce unemployment rate to below 5 per cent.

The Eleventh Plan emphasizes that the growth in various sectors of the economy can be achieved only if supported by appropriate skill development programmes at various levels. The Eleventh Plan document has spelt out certain deficiencies in the skill development scenario in the country as it exists presently. The thrust of the plan therefore will be on creating a pool of skilled manpower in appropriate number with adequate skills, in line with the requirements of the ultimate users of manpower such as the industry, trade and service sector. Such an effort is necessary to support the employment expansion through inclusive growth including in particular a shift of surplus labour from agriculture to non-agriculture.

RECENT INTERVENTIONS

In the recent past, the Government has taken several steps to provide employment to the labour force. One of the significant efforts in this direction is the enactment of the Mahatma Gandhi National Rural Employment Guarantee Act, 2005 (MGNREGA). MGNREGA is an important step towards the realization of the right to work and to enhance the livelihood security of the households in the rural areas of the country. The scheme provides at least 100 days of guaranteed wage employment in every financial year to every household whose adult member volunteers to do unskilled manual work.

SOURCES OF DATA ON EMPLOYMENT-UNEMPLOYMENT AND ESTIMATION OF EMPLOYMENT-UNEMPLOYMENT SITUATION IN INDIA

Periodic Employment & Unemployment data are crucial to undertake appropriate policy planning decisions as well as to measure the effectiveness of Government policies aimed at eradicating poverty by providing employment opportunities to the people of the country.

Integration of Indian economy with the global economy in the post reforms period has increased volatility of the economy and hence has necessitated availability of data on important indicators of the economy at regular intervals. One such important data requirement relates to statistics on Employment and Unemployment. The impact of the Government policies on employment generation can be assessed from time to time only in case a mechanism to gather employment-unemployment data at regular and frequent intervals is put in place. Presently however, reliable data on the employment-unemployment situation in the country is available after a gap of five years in the form of quinquennial survey of the National Sample Survey Organization (NSSO). In the developed countries like the United States on the other hand, monthly statistics on unemployment are released by the Bureau of Labour Statistics. Such vital information enables the policy makers to evaluate the existing policies/programmes and to immediately replace or modify such policies which are not effective. Such frequent availability of data needs to be ensured in our country as well. This would enable the Government to assess the impact of various measures and policies in time so as to take appropriate corrective action, if necessary.

Presently in our country, the main sources of data on employment-unemployment are the various surveys being conducted by the National Sample Survey Organization (NSSO), the Population Census and the Employment Market Information Programme of DGET which provides

information on the organized sector employment and Employment Exchange Statistics.

Of all the data sources available, surveys conducted by the NSSO are the main data source on employment and unemployment in the country. Beginning with the 27th round survey and based on the concepts, definitions and procedures as recommended by the Dantwala Committee (1970), NSSO has been conducting quinquennial surveys on employment and unemployment in the country.

So far eight quinquennial surveys on employment and unemployment have been conducted by the NSSO.

1. 27th Round Survey (1972-73)
2. 32nd Round Survey (1977-78)
3. 38th Round Survey (1983)
4. 43rd Round Survey (1987-88)
5. 50th Round Survey (1993-94)
6. 55th Round Survey (1999-2000)
7. 61st Round Survey (2004-05)
8. 66th Round Survey (2009-10) *

(*) Report not yet released

Apart from these quinquennial surveys on employment and unemployment, NSSO has been regularly collecting information on certain key items of employment and unemployment, as a part of its Annual series from a smaller sample of households in each round since its 45th round (July 1989 – June 1990) through the schedule relating to Household Consumer Expenditure. Initially, the annual series aimed at measuring employment and unemployment indicators in terms of the usual and current weekly status only. The employment estimates based on the two concepts continued till the 59th round of NSS. In the NSS' 60th round survey, there was a significant change in the

procedure of data collection and contents as compared to the earlier annual rounds. In the NSS 60th round, a separate schedule on employment and unemployment was canvassed for a separate set of sample households for providing estimates of employment and unemployment on the basis of current daily status approach also.

Based on the data available from the 61st round, the employment (Current daily status) growth accelerated during 1999-2000 to 2004-05 as compared to the previous period of 1993-94 to 1999-2000. During 1999-2000 to 2004-05, about 47 million work opportunities were created as compared to 24 million during the period 1993-94 to 1999-2000. Employment growth accelerated from 1.25 per cent per annum during 1993-94 to 1999-2000 to 2.62 per cent per annum during 1999-2000 to 2004-05. However, a higher labour force growth of 2.84 per cent per annum during 1999-2000 to 2004-05, which exceeded the growth in workforce of 2.62 per cent per annum, resulted in an increase in unemployment rate from 7.3 per cent in 1999-2000 to 8.3 per cent in 2004-05.

Long term trends in employment situation emerge when comparisons are made over two relatively longer periods, that is, 1983 to 1993-94 (Period I) and 1993-94 to 2004-05 (Period II). Long term trend analysis suggests that, employment grew more slowly than the labour force in period II which raised the unemployment rate from 6.1 per cent in 1993-94 to 8.3 per cent in 2004-05. In absolute terms, the average annual increase in employment opportunities during period II was 6.45 million, which is lower than the annual increase of 7.09 million in period I (Eleventh Plan, Planning Commission). Assessment of employment situation based on the UPSS over the same periods i.e. 1983-1994 and 1993-94 to 2004-05, suggests that employment growth in period I was 2.06 per cent per annum as against 1.87 per cent in the period II (DGET Report, 2010).

In recent years, the quality of employment created has also been a matter of concern as reflected in deceleration in organized sector employment and low

share of regular employees in total employment indicating a process of casualisation of the workforce. During 1999-2000 to 2004-05, most of the growth of 4.7 per cent per annum in non agriculture employment, was in the unorganized sector. According to data available from DGET, organized sector employment increased at a rate of 1.2 per cent per annum in the period 1983 to 1993-94 but declined at a rate of 0.03 per cent per annum in the period 1994-2007. This decline is attributed primarily to a decline in employment in PSUs.

At present, the main challenges on the employment front, therefore, are not only to ensure a rapid growth of employment creation but also improvement in the quality of employment created. These constitute the thrust of the employment strategy being adopted in the Eleventh Five Year Plan. The Eleventh Plan rightly emphasizes the need to achieve rapid growth of employment and to increase the number of regular wage employment opportunities through a process of inclusive growth.

NEED FOR THE PRESENT SURVEY

As stated earlier, the main data sources available in our country for comprehensive information on employment & unemployment are the surveys conducted by the NSSO, on quinquennial basis. Since these surveys make the data available only after a gap of five years, it becomes desirable to have the data gap for the interregnum filled-up so that such data are available at an interval of at least a year. Accordingly, the Ministry of Labour & Employment entrusted the task of conducting the household employment-unemployment survey on an annual basis to the Labour Bureau.

REFERENCE PERIOD

Information in the present Employment-Unemployment survey has been collected for the fixed reference period from 1.4.2009 to 31.3.2010.

METHODOLOGY

The Survey has been conducted in 28 selected States/UTs during the period from 1.4.2010 to 15.8.2010. In most of the States/UTs (except Tamil Nadu, Pondicherry and Sikkim) data collection has been undertaken by the Investigators recruited by the Labour Bureau for the survey on contract basis. Supervision of field work, including scrutiny of filled-in schedules, in these States/UTs was entrusted to district level officers of the Directorates of Economics & Statistics (DES) of the concerned States/UTs. In case of Tamil Nadu, Pondicherry and Sikkim, both the activities, viz., collection of data and supervision of field work have been undertaken by the DES of these States/UTs. Extensive training to all personnel engaged in collection of data as well as its supervision was imparted by the officers of the Labour Bureau at the Regional/State level.

In certain States, some contract Investigators recruited by the Labour Bureau for the survey either did not join their duties or left during the currency of the field work. In some such States, namely, Punjab, U.P., M.P. and Rajasthan, Labour Bureaus' regular Investigators were deputed for data collection. In other cases, the respective States' DES were requested to get the data collected in such districts wherein contract Investigators engaged by Labour Bureau were not available for this purpose.

Labour Bureau was required to submit the report on the survey by the end September, 2010. Canvassing of around 46000 household schedules was ensured upto 15th August, 2010.

With a view to ensure the quality of data collected, Labour Bureau's officers also supervised the field work in some cases, in addition to supervision undertaken by the States/UTs DES officers.

FINALIZATION OF QUESTIONNAIRES, SAMPLE DESIGN & ESTIMATION PROCEDURE USED IN THE SURVEY

The Questionnaires used in the present Employment-Unemployment Survey have been designed under the supervision and guidance of a 'Group of Experts' chaired by the Additional Director General, Central Statistical Organization (CSO). Members of the Expert Group included subject-experts from various wings of the National Sample Survey Organisation (NSSO) such as Survey Design & Research Division (SDRD) and Data Processing Division, from the Directorate General of Employment & Training, from the National Accounts Division (NAD) of CSO and from the Ministry of Labour & Employment. Composition of the Group of Experts is annexed.

Sample Design & Estimation Procedure used in the survey has also been finalized with the approval of the 'Group of Experts'.

Chapter-II

CONCEPTS AND DEFINITIONS

Important concepts and definitions used in the survey are explained below.

Household: A group of persons normally living together and taking food from a common kitchen constitutes a household. The members of a household may or may not be related by blood or marriage to one another.

Household size: The number of members normally residing in a household is its size. It will include temporary stay-aways (those whose total period of absence from the household is expected to be less than 6 months) but exclude temporary visitors and guests (expected total period of stay less than 6 months). Even though the determination of the actual composition of a household will be left to the judgment of the head of the household, the following procedures will be adopted.

(i) In deciding the composition of a household, more emphasis is to be placed on 'normally living together' than on 'ordinarily taking food from a common kitchen'.

(ii) A resident employee, or domestic servant, or a paying guest (but not just a tenant in the household) will be considered as a member of the household with whom he or she resides even though he or she is not a member of the same family.

(iii) When a person sleeps in one place (say, in a shop or in a room in another house because of space shortage) but usually takes food with

his or her family, he or she should be treated not as a single member household but as a member of the household in which other members of his or her family stay.

(iv) If a member of a household (say, a son or a daughter of the head of the household) stays elsewhere (say, in hostel for studies or for any other reason), he/she will not be considered as a member of his/her parent's household. However, he/she will be listed as a single member household if the hostel is listed.

Economic activity: The entire spectrum of human activity falls into two categories: economic activity and non-economic activity. Any activity that results in production of goods and services that adds value to national product is considered as an economic activity. The economic activities have two parts - market activities and non-market activities. Market activities are those that involve remuneration to those who perform it i.e., activity performed for pay or profit. Such activities include production of all goods and services for market including those of government services, etc. Non-market activities are those involving the production of primary commodities for own consumption and own account production of fixed assets.

The term 'economic activity' in the Employment and Unemployment survey will include:

(i) all the market activities described above, i.e., the activities performed for pay or profit which result in production of goods and services for exchange,

(ii) of the non-market activities,

(a) all the activities relating to the primary sector (i.e. industry Divisions of NIC-08) which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption .

(b) the activities relating to the own-account production of fixed assets, which include construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labour or a supervisor.

Activity status: It is the activity in which a person is found engaged during the reference period, which decides the person's participation in economic and /or non-economic activities. According to this, a person will be in one or a combination of the following three status during a reference period:

(i) Working or engaged in economic activity (work),
(ii) Not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' in case the 'work' is available and
(iii) Neither engaged in any economic activity (work) nor available for 'work'.

Activity status mentioned against sl.no. (i) & (ii) above, are associated with 'being in labour force' and the last sl.no. (iii) With 'not being in the labour force'. Being in labour force is further categorised into (i) employment and (ii) unemployment. The three broad activity statuses have been further sub-divided into detailed activity categories. These are listed below:

(i) working or being engaged in economic activity (employed):

(a) worked in household enterprise (self-employed) as an own-account worker
(b) worked in household enterprise (self-employed) as an employer
(c) worked in household enterprise (self-employed) as 'helper'
(d) worked as regular salaried/wage employee
(e) worked as casual wage labour in public works
(f) worked as casual wage labour in other types of works

(ii) not working but seeking or available for work (unemployed) :

(a) sought work
(b) did not seek but was available for work

(iii) neither working nor available for work (not in labour force) :

(a) attended educational institutions
(b) attended to domestic duties only
(c) attended to domestic duties and was also engaged in free collection of goods, tailoring, weaving, etc. for household use
(d) recipients of rent, pension, remittance, etc.
(e) not able to work due to disability
(f) others (including beggars, prostitutes etc.)

Various categories like, 'workers', 'unemployed', 'labour force', 'out of labour force' are as explained below:

(a) *Workers (or employed):* Persons who are engaged in any economic activity or who, despite their attachment to economic activity, have abstained from work for reasons of illness, injury or other physical disability, bad weather,

festivals, social or religious functions or other contingencies necessitating temporary absence from work constitute workers. Unpaid helpers who assist in the operation of an economic activity in the household, farm or non-farm activities are also considered as workers. All the workers are assigned one of the detailed activity status under the broad activity category 'working or being engaged in economic activity'.

(b) ***Seeking or available for work (or unemployed):*** Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work *under the prevailing condition of work and remuneration* are considered as those who are 'seeking or available for work' (or unemployed).

(c) ***Labour force:*** Persons who are either 'working' (or employed) or 'seeking or available for work' (or unemployed) during the reference period together constitute the labour force.

(d) ***Out of labour force:*** Persons who are neither 'working' and at the same time nor 'seeking or available for work' for various reasons during the reference period are considered to be 'out of labour force'. The persons under this category are students, those engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young or too old persons, prostitutes, etc.

Workers have been further categorized as *self-employed, regular salaried/wage employee and casual wage labour.* These categories are defined in the following paragraphs.

Self-employed: Persons who operate their own farm or non-farm enterprises or are engaged independently in a profession or trade on own-account or with one or a few partners are self-employed in household enterprises. The essential feature of the self-employed is that they have *autonomy* (i.e., regarding how, where and when to produce) and *economic independence* (i.e., regarding market, scale of operation and money) for carrying out operation. The fee or remuneration received by them consists of two parts - the share of their labour and profit of the enterprise. In other words, their remuneration is determined wholly or mainly by sales or profits of the goods or services which are produced by themselves.

The self-employed persons may again be categorised into the following three groups:

(i) ***own-account workers:*** They are the self-employed who operate their enterprises on their own account or with one or a few partners and who during the reference period by and large, run their enterprise without hiring any labour. They may, however, have unpaid helpers to assist them in the activity of the enterprise.

(ii) ***employers:*** The self-employed persons who work on their own account or with one or a few partners and by and large run their enterprise by hiring labour are the employers, and

(iii) ***helpers in household enterprise:*** The helpers are a category of self-employed persons mostly family members who keep themselves engaged in their household enterprises, working full or part time and do not receive

any regular salary or wages in return for the work performed. They do not run the household enterprise on their own but assist the related person living in the same household in running the household enterprise.

Home Workers: There is a category of workers who work at a place of their choice which is outside the establishment that employs them or buys their product. Different expressions like 'home workers', 'home based workers' and 'out workers' are synonymously used for such workers. For the purpose of this survey, all such workers will be commonly termed as 'home workers' and will be categorised as 'self-employed'. The 'home workers' have *some degree of autonomy* and *economic independence* in carrying out the work, and their work is not directly supervised as is the case for the *employees.* Like the other self-employed, these workers have to meet certain costs, like actual or imputed rent on the buildings in which they work, costs incurred for heating, lighting and power, storage or transportation, etc., thereby indicating that they have some tangible or intangible means of production. It may be noted that *employees* are not required to provide such inputs for production.

Regular salaried/wage employee: Persons working in others farm or non-farm enterprises (both household and non-household) and getting in return salary or wages on a regular basis (and not on the basis of daily or periodic renewal of work contract) are the regular salaried/wage employees. The category not only includes persons getting time wage but also persons receiving piece wage or salary and paid apprentices, both full time and part-time.

Casual wage labour: A person engaged in casual labour in others farm or non-farm enterprises (both household and non-household) and getting in return wage according to the terms of the daily or periodic work contract is a casual wage labour. Usually, in the rural areas, casual labourers are

normally engaged in 'public works' activities. *'Public works'* are those activities which are sponsored by Government or local bodies for construction of roads, bunds, digging of ponds, etc. as relief' measures such as flood relief, drought relief and famine relief, and also various employment generation scheme under poverty alleviation programmes.

DEFINITIONS OF VARIOUS TYPES OF ENTERPRISES*:*

(i) Proprietary: When an individual is the sole owner of an enterprise, it is a proprietary enterprise. Own account production of fixed assets for own use, when produced by a single member, will be classified as proprietary enterprise.

(ii) Partnership: Partnership is defined as the "relation between persons who have agreed to share the profits of a business carried on by all or any one of them acting for all". There may be two or more owners, belonging to the same or different households, on a partnership basis, with or without formal registration (where there is a tacit understanding about the distribution of profit among the so-called partners). Own account production of fixed assets, when produced by two or more members belonging to the same or different households will be classified as partnership enterprises. Thus, own account production of fixed assets by a group of households for community use will be classified as partnership enterprise.

(iii) Government/public sector enterprise: This category includes enterprises, which are wholly owned/ run/managed by Central or State governments, quasi-government institutions, local bodies like universities,

education boards, municipalities, etc. An enterprise should not be treated as a public sector enterprise if it is run on a loan granted by government, local body etc.

(iv) Private limited company: Private company means a company which by its articles:

(a) restricts the right to transfer its shares, if any,

(b) limits the number of its members to fifty not including-

(i) persons who are in the employment of the company, and

(ii) persons who, having been formerly in the employment of the company, were members of the company while in that employment and have continued to be members after the employment ceased; and

(c) prohibits any initiation to the public to subscribe for any share in, or debentures of, the company.

(v) Public limited company: A public limited company is defined as a company that is not a private company. As such, public companies can have an unlimited number of members and can invite the public to subscribe to its shares and debentures.

(vi) Co-operative societies: Co-operative society is one that is formed through the co-operation of a number of persons, recognized as members of the society, to benefit themselves. In the process, the funds are raised by member's contributions/investments and the profits generated out of

the society's activities are shared by the members. A government agency can also be a member or shareholder of a registered co-operative society but this fact cannot render the society into a public sector enterprise for the purpose of this survey.

(vii) Trust: An arrangement through which one set of people, the trustees, are the legal owners of property which is administered in the interest of another set, the beneficiaries. Trusts may be set up to provide support for individuals or families, to provide pensions, to run charities, to liquidate the property of the bankrupts for the benefit of their creditors, or for the safe keeping of securities bought by trusts with their investor's money. The assets, which trusts hold are regulated by law. These must be administered in the interests of the beneficiaries, and not for the profit of the trustees.

(viii) Employer Households (i.e. private households employing maid servant, watchman, cook etc.): The households which are employing maid servant, watchman, cook, private tutor, etc. will be considered notionally as enterprise for the purpose of this survey and will be classified as 'Employer households'.

CHAPTER III

DEMOGRAPHIC PARTICULARS

GENERAL

While studying the Employment-Unemployment situation in the selected States/UTs, an effort was also made to collect information on demographic data of the individuals covered during the survey. This Chapter as well as others present demographic findings based on such data, mainly at overall level of States/UTs covered in the Survey. State-wise details are presented in the Tables annexed. Population estimates derived from the present survey are found to be comparable with the census population projections at overall level. Hence, population estimates of the survey have been used to derive ratios of various parameters, which are expected to be reliable. At disaggregated level, it may, however, be advisable to estimate an absolute number in any specific category on the basis of census population projection for that category. Further, the per thousand distribution figures presented in various tables are rounded off figures. These ratios need to be used for deriving estimates, if any, keeping this fact in view.

It may also be noted that some estimates at State/UT level may not be as reliable as overall estimates because of small sample size at disaggregated level.

ALLOCATION AND ACTUAL COVERAGE OF SAMPLE UNITS

Information on the allocated and the surveyed sample units is depicted in Statement 3.1. It may be observed that a total of 4794 villages/Urban Frame

Survey (UFS) blocks were initially allocated for coverage, out of which 3829 have actually been covered. Total sample of 4794 units included 2400 villages (Panchayat wards in Kerala) and 2394 Urban Frame Survey blocks allocated for coverage. Against this, 2056 villages and 1773 UFS blocks could actually be covered. In fact, equal number of rural and urban units was allocated for coverage in all the States/UTs, except Dadra & Nagar Haveli, wherein equal number of urban units were not available for allocation. Significantly, lower coverage of urban units is observed in the States, namely, Assam, Gujarat, Jammu & Kashmir and Maharashtra, whereas no urban unit could be covered in Dadra & Nagar Haveli.

Statement 3.1: Allocation and coverage of sample villages/urban blocks

Sector	Sample Allocated	Sample Surveyed
Rural	2400	2056
Urban	2394	1773
Total	4794	3829

Comparatively low coverage of allocated sample units in some urban areas is on account of late availability of maps of the sample UFS blocks. In certain other cases, like non-joining/late joining/intermittent drop out of the contract Investigators recruited by Labour Bureau to undertake the field work are also responsible for low coverage in urban as well as rural areas.

A total of 45859 households have actually been surveyed, of which 24653 (53.8 per cent) are rural households and the remaining 21206 (46.2 per cent) are urban households.

POPULATION ESTIMATES

Derived on the basis of the data collected during the survey, estimates of population by sex and the sex ratio in rural & urban areas as well as at overall level of the 28 States/UTs covered in the survey are presented in Statement 3.2. Total population of these States/UTs is estimated to be 1182 million, of which about 52 per cent are male and 48 percent are female. Out of the total population of the States/UTs covered, 872 million persons (73.8 per cent) live in rural areas and 310 million persons (26.2 per cent) live in urban areas. Gender-wise composition of population is more or less the same in the rural as well as the urban areas.

Statement 3.2: Estimates of population (in millions) by sex in Urban and Rural Areas and the sex ratio

Sector	Male	Female	Persons	Sex Ratio
Rural	455	417	872	915
Urban	161	149	310	924
Overall	616	566	1182	917

Sex ratio (number of females per thousand males) is estimated to be 917 at overall level i.e. for the rural and the urban areas combined. The sex ratio in the rural areas is 915 and in the urban areas it stands at 924.

A comparison of the population projections for the year 2009-10 based on the RGI "Report of Population Projections for India and States 2001-2026" and the population estimated by using the Bureau's survey data shows a variation only of 2.2 per cent. Based on the RGI projections for the year 2009-10, the estimated population in the 28 States/UTs covered during the survey is 1157 million whereas the Bureau's estimated population in these States/UTs is 1182

million. Further, as per the RGI report, the sex ratio is estimated at 932 during the year 2009-10 as against the Bureau's estimate of 917 for this period.

ESTIMATES OF HOUSEHOLDS AND AVERAGE HOUSEHOLD SIZE

Information on estimated number of households, per thousand distributions of these households and average household size in urban and rural areas is shown in Statement 3.3.

Statement 3.3: Estimated Number of Households, distribution in per 1000 household and Average Household size sector wise

Estimates	Rural	Urban	Overall
Number of Households (in millions)	172	66	238
Distribution of Households (per thousand)	722	278	1000
Average Households Size	5.1	4.7	5.0

It is observed that the total estimated population of the 28 selected States/UTs, which is 1182 million, lives in 238 million households. In rural areas, 872 million persons are living in 172 million households, whereas in urban areas 310 million persons reside in 66 million households.

Per thousand distribution of households indicates that 722 households are rural and the remaining 278 are urban. Average household size has been worked out to be 5.1 in rural areas, 4.7 in urban areas and 5.0 at overall level.

The NSSO estimates for average household size based on 2007-08 survey results shows the household size 4.5 at overall level with 4.7 in rural areas and 4.2 in the urban areas.

HOUSEHOLDS BY HOUSEHOLD TYPE

Per thousand distribution of households in rural areas by household type may be perused from Statement 3.4.

Statement 3.4: Per thousand distribution of rural households by type of household

Household Type	Estimated Number of Households (in millions)	Per thousand distribution of households
1. Self Employed in Agriculture	50	288
2. Self Employed in non-agriculture	24	139
Total self-employed	**74**	**427**
3. Agriculture Labour	38	223
4. Other Labour	32	189
Total Rural Labour	**70**	**412**
5. Other Households	28	161
Total Households	**172**	**1000**

Per thousand distribution of households in rural areas indicates that 288 are self-employed in agriculture and 139 are self-employed in non-agriculture taking the total number of self-employed households to 427. Total rural labour households are estimated to be 412 per thousand, of which 223 are agriculture labour households and 189 are other labour households. Number of other households works out to be 161 per thousand.

Statement 3.5: Per thousand distribution of Urban Households by Household Type

Household Type	Estimated Number of Households (in millions)	Per thousand distribution of households
Self-employed	22	331
Regular Wage	21	315
Casual Labour	13	205
Other households	10	149
Total Households	**66**	**1000**

Per thousand distribution of urban households presented in Statement 3.5 indicates that 331 households belong to the self-employed category, 315 are regular wage households and 205 are casual labour households. Remaining 149 households have income sources other than those specified above as the major source of income.

LITERACY RATE

RGI's population census as well as the NSSO' survey reports present literacy rates for the population in the age group of 7 years and above. For comparative purpose, the literacy rate in the present survey are also derived for the 7 years and above age population and presented in Statement 3.6 by sex for the rural and urban areas.

It may be observed that in rural areas, number of per thousand literate persons is 746. Such proportion for males is 829 and for females it is 656 in rural

areas. With per thousand literate persons in urban areas being 860, per thousand literate males are 908 and per thousand literate females are 808 in these areas.

Statement 3.6: Literacy Rate (per 1000 persons) by Sex in Rural & Urban Areas

Sector	**Male**	**Female**	**Persons**
Rural	829	656	746
Urban	908	808	860
Overall	850	697	777

Results of the Survey indicate that the literacy rates in urban areas are higher than those in rural areas for both the genders. Similarly, literacy rates of males in urban as well as rural areas are higher than those of females.

At overall the literacy rate is 777 persons per 1000 persons. The NSSO estimates for the literacy in the year 2007-08 survey results have shown 708 persons out of 1000 persons. Planning commission in its 11th plan document has set a target of 85 per cent or more literacy rate for the population of age 7 years and above.

Statement 3.7: Distribution of persons by General Educational level (per 000) of age 7 years & above in Rural & Urban Areas.

Sector	Not literate			Upto secondary Level			Above secondary level		
	M	F	P	M	F	P	M	F	P
Rural	171	344	254	752	621	689	77	35	57
Urban	92	192	140	709	669	690	199	138	170
Overall	150	303	223	741	634	690	109	63	87

Statement 3.7 contains information on per thousand distribution of male and female population by level of education in urban and rural areas. Per thousand 'Not literate' persons are estimated to be 254 in rural areas, 140 in urban areas and 223 at overall level. In terms of educational attainment, males outnumber females in both the categories of 'upto secondary level' and 'above secondary level' in rural as well as in urban areas. Educational attainments for males up to secondary level have been estimated to be 741 as against 634 females per thousand in this category. Similarly, 109 males are estimated to be educated above secondary level per thousand against 63 per thousand females educated up to this level.

Chapter-IV

LABOUR FORCE, EMPLOYMENT & UNEMPLOYMENT

GENERAL

Labour force refers to that segment of population which supplies or offers to supply labour for production and therefore, includes both employed and unemployed persons. In the present survey, various estimates of the labour force have been derived on the basis of usual principal status approach only.

The estimates of the labour force according to the usual principal status indicate the number of persons who either worked or were looking/available for work for a relatively longer part of the reference period, which in case of the present survey is financial year 2009-10 (from 1.4.2009 to 31.3.2010).

The basic concepts of important Labour Force parameters are given below:

Labour force participation rate: - Labour force participation rate (LFPR) is defined as the number of persons in the labour force per 1000 persons.

$$\text{LFPR} = \frac{\text{no. of employed} \ + \ \text{no. of unemployed persons}}{\text{Total Population}} \times 1000$$

Worker-population ratio: - Worker-population ratio (WPR) is defined as the number of persons employed per 1000 persons.

$$WPR = \frac{\text{Number of employed persons}}{\text{Total population}} \times 1000$$

Proportion Unemployed: - Proportion Unemployed (PU) is defined as the number of persons unemployed per 1000 persons.

$$PU = \frac{\text{Number of unemployed persons}}{\text{Total population}} \times 1000$$

Unemployment Rate: - Unemployment rate (UR) is defined as the number of persons unemployed per 1000 persons in the labour force (employed & unemployed).

$$UR = \frac{\text{Number of unemployed persons}}{\text{Labour Fource}} \times 1000$$

ESTIMATES OF VARIOUS PROPORTIONS

Based on the survey results, the proportion estimates(per thousand) of labour force, worker population ratio, proportion unemployed, unemployment rate etc have been derived for different age groups as well as by sex. The results are presented in the form of proportions (per 1000 persons) for the States/UTs as well as at the overall level. At overall level in addition to the proportions the number of persons has also been estimated and presented in the tables.

WORKER POPULATION RATIO

At overall level, the worker population ratio is estimated to be 325 persons which implies that at overall level of the States/UTs covered, 32.5 per cent of the population is employed. In absolute terms at overall level the employed persons are estimated to be 384 million. Further while analyzing sex wise worker population ratio, it is observed that per thousand population, 495 males and 140 females are estimated to be employed at overall level. The survey results further reveal that the sex ratio of the employed persons is 259

at overall level indicating that 259 females are employed for every 1000 employed males.

In the rural and urban sector, the worker population ratio is estimated to be 329 and 314 respectively. The sex ratio of the employed persons is 278 and 204 respectively in rural and urban sector.

LABOUR FORCE PARTICIPATION RATE (LFPR)

At overall level, the LFPR has been worked out to be 359 thereby implying that 359 persons are either employed or available for work per 1000 population. At overall level, the LFPR of males and females is estimated to be at 538 and 163 persons respectively. The sex ratio of the labour force, at overall level is estimated to be 279.

In the rural and urban sectors, the LFPR is estimated at 365 and 340 respectively. The sex ratio of the labour force in rural sector is 299 at overall level whereas for the urban sector the same is 222.

UNEMPLOYMENT RATE

The unemployment rate is the ratio of the number of unemployed persons in the labour force per thousand. At overall level the unemployment rate is estimated at 94, which imply that 9.4 per cent of the labour force is unemployed and looking for jobs. In absolute terms about 40 million persons are found unemployed based on the survey results at overall level of the State/UT's surveyed. For male and female persons the unemployment rate at overall level is 80 and 146 respectively.

A majority of the estimated unemployed persons (80 per cent) is in the rural sector at overall level. While comparing the unemployment rate in the rural and the urban sectors at overall level, it is observed the same is higher in the former (101) as compared to the latter (73).

Comparison of Labour Bureau's present survey results for the year 2009-10 with NSSO's Employment-Unemployment survey results for 2007-08, reveals that the unemployment rate derived on the basis of the Bureau's survey is quite high. Higher unemployment rate may be parting attributed to as much as 10 per cent difference in the contribution of agriculture sector to total employment estimated in the present survey vis-à-vis the NSSO 2007-08 survey estimates. While the shift of workforce from agriculture to other sectors is a positive trend for a fast growing economy, the steep reduction in lower share of agriculture employment based on the Bureau's survey could be attributed to lack of adequate probing skills of the Contract Investigators.

There could be some underestimation in the agriculture sector employment due to lesser-probing by the contract investigators especially in case of women workers who tend to be employed more casually in the agriculture and allied sectors such as forestry, livestock and fisheries.

PROPORTION UNEMPLOYED

The proportion unemployed for a particular age group is derived by dividing the unemployed in that age group by total population of the age group per thousand. The survey results reveal that at overall level, the proportion of unemployed per thousand is 34 which implies that 3.4 per cent of the total population is unemployed at overall level. In rural and urban sectors the proportion unemployed is estimated at 37 and 25 respectively.

Based on the usual principal status approach the various parameters of the labour force obtained from the data collected during the survey are summarized below in statement 4.1:

Statement 4.1: LFPR, WPR, PU and UR estimates

Indicator	**Rural**			**Urban**			**Rural + Urban**		
	Male	Female	Persons	Male	Female	Persons	Male	Female	Persons
LFPR	539	176	365	534	129	340	538	163	359
WPR	492	150	329	503	111	314	495	140	325
PU	46	26	37	32	18	25	43	24	34
UR	87	148	101	59	138	73	80	146	94

USUAL PRINCIPAL ACTIVITY OF THE PERSONS OF AGE 5 YEARS & ABOVE

The sample persons covered in the survey are categorized into various activities on the basis of usual principal status approach. Based on the major time criterion of his/her activities, a person may be in the working/ 'employed' category or 'unemployed' category or in the category of 'not in the labour force'. In the working/ employed category a person's activity is further divided into three categories viz, self employed, regular wage/salaried and casual labour.

Findings of the survey show that out of 1000 persons, 351 persons are in the employed category, 36 in the unemployed category and the rest 613 persons are out of labour force at overall level of the States/UT's surveyed. Within the employed category, out of 351 persons, 154 are self employed, 59 are regular wage/salaried and the remaining 138 are in casual labour category at overall

level. A comparison of the gender data indicates that 534 males and 151 females are employed per thousand of each gender at the overall level.

In the rural sector for every 1000 persons, 356 persons are in the employed category, 40 are unemployed and the rest 604 persons are not in the labour force. Sex wise data at overall level of the rural sector, more or less compares with the trend obtained for rural and the urban sectors combined.

In the urban sector out of every 1000 persons, the number of employed persons is 335, number of unemployed is 27 and the remaining 638 persons are not in the labour force. Majority of the females in the urban sector (86 per cent) and the rural sector (81 per cent) are out of labour force.

Statement 4.2: Activity-wise categorization of persons by sex in rural and urban sectors

Activity	**Rural**			**Urban**			**Rural + Urban**		
	Male	Female	Persons	Male	Female	Persons	Male	Female	Persons
employed	534	163	356	538	117	335	534	151	351
unemployed	51	28	40	34	19	27	46	26	36
Not in labour force	415	809	604	428	864	638	420	823	613
All	1000	1000	1000	1000	1000	1000	1000	1000	1000

EMPLOYMENT BY INDUSTRY GROUPS

Based on the survey results the employed persons are further classified into 9 broad industry groups based on NIC 2008 classification. These 9 broad industry groups are given below in the table:

Sl. No.	Broad Industry Group	Coverage as per NIC 2008 Sections
1	Agriculture, forestry & fishing	A
2	Mining & Quarrying	B
3	Manufacturing	C
4	Electricity, gas & water supply	D,E
5	Construction	F
6	Wholesale & Retail trade and Restaurants & hotels	G,I
7	Transport, storage and communications	H,J
8	Financing, Insurance, Real Estate and Business services	K,L,M,N
9	Community, social and personal services	O,P,Q,R,S
10	others	T,U

It may be observed from the statement 4.3 that at overall level (Rural + Urban and all States/UT's covered), out of 1000 employed persons, 455 are employed in agriculture, forestry and fishing group. In the manufacturing and construction sectors 89 and 75 persons out of 1000 persons respectively are found to be employed.

As already known, findings of the present survey reveal that in the rural sector majority of the employed persons are in the agriculture, forestry and fishing related industry group (576 persons out of 1000 persons). This is followed by construction (72 persons), Manufacturing (67 persons) and Community Services (63 persons).

Survey findings further indicate that in urban sector out of 1000 persons, 173 persons are employed in the wholesale and retail trade etc industry group

followed by 154 persons in the manufacturing industry, 146 persons in the community services etc.

Statement 4.3: Per thousand distribution of employed persons by broad industry groups

Industrial Classification	**Rural**	**Urban**	**Rural + Urban**
Agriculture, forestry & fishing	576	99	455
Mining & Quarrying	22	15	21
Manufacturing	67	154	89
Electricity etc.	13	33	18
Construction	72	86	75
Wholesale, retail etc.	59	173	88
Transport, storage etc.	28	78	41
Financing, insurance etc	14	61	26
Community services etc.	63	146	84
others	86	155	103
All	1000	1000	1000

Categories of Employment by Industry Groups

The proportions of various categories of employment, namely self employed, regular wage/salaried person and casual labour obtained from the survey data are distributed into 9 broad industrial groups cited in the preceding paragraph.

It is seen that in the self employed person's category, maximum proportion of persons is engaged in agriculture, forestry & fishing group (572 out of 1000 persons) followed by wholesale and retail trade (135 out of 1000 persons) at overall level.

In the second employment category of regular wage/salaried person, maximum proportion of the employed is engaged in the community services (227 persons out of 1000 persons) followed by 153 in manufacturing industry.

In the third employment category i.e. casual labour; a majority of the persons are in the agriculture, forestry and fishing industry group (467 persons out of 1000 persons) followed by 148 in the construction sector.

Chapter-V

EMPLOYMENT BY ENTERPRISE TYPES & WORKING CONDITIONS

INTRODUCTION

The working conditions, social security, etc. are important indicators of the level of wellbeing derived by the employed person. In the survey, information has been collected to study the working conditions of the employed persons. Further, the collection of information on the type of enterprise in which the person is employed, nature of enterprise viz. perennial, seasonal or ad-hoc, whether person is getting paid leave, social security benefits etc. has also been compiled through the present survey. Findings in respect of these parameters have been summarized which are as follows.

TYPE OF ENTERPRISES

The persons categorized as employed on the basis of usual principal status approach are distributed among the following broad categories of enterprise type.

i) Proprietary
ii) Partnership
iii) Government/Public sector
iv) Public/Private Limited Company.
v) Co-operative society/trust/non-profit institution
vi) Employers households
vii) Other categories.

The survey results reveal that majority of the employed persons are employed in proprietary type of enterprises (494 persons out of 1000 persons) followed by public/private limited companies (200 persons) etc at overall level.

At the level of rural and urban sector also, majority of the workers are reportedly employed in the proprietary type of enterprises (517 persons and 428 persons respectively out of 1000 persons).

Statement 5.1: Distribution of workers by type of enterprise

Type of Enterprise	**Rural**	**Urban**	**Rural + Urban**
Proprietary	517	428	494
Partnership	32	37	33
Govt./Public Sector	69	146	89
Public/Private Limited Company.	77	168	200
Co-operative Society	12	19	14
Employer Household	28	26	27
Others	265	176	243
All	1000	1000	1000

ENTERPRISES WISE EMPLOYMENT BY BROAD INDUSTRY GROUP

The persons treated as employed in various types of enterprises on the basis of usual principal status approach are further classified into 9 broad industry groups.

Analysis of collected data indicates that out of the total persons employed in the proprietary type of enterprises a majority is employed in the agriculture, forestry and fisheries group (580 persons out of 1000 persons), followed by wholesale and retail trade group (120 persons out of 1000 persons) at overall level.

In the partnership type of enterprises also, maximum proportion of persons employed is in the agriculture, forestry and fisheries group (392 persons out of 1000 persons) followed by manufacturing group (147 persons out of 1000 persons) at overall level.

In the government/public sector type of enterprises, 340 out of 1000 persons are employed in the community services group at overall level.

In public/private Limited companies per 1000 persons employed, 244 persons are employed in the manufacturing sector followed by 179 persons in agriculture, forestry and fisheries group at overall level.

In the co-operative society/trust/other non-profit institution type of enterprises, for every thousand persons employed, 282 persons are employed in the community services group followed by 152 persons in agriculture, forestry & fisheries group at overall level of the States/UTs surveyed.

ENTERPRISES BY EMPLOYMENT SIZE

The employed population estimated on the basis of data collected in the survey is further classified into three broad categories based on the strength of the unit/enterprise in which they are working. These three broad categories are given below:

I. Less than 10 workers
II. 10-19 workers
III. 20 or more workers
IV. Not reported/unknown

The survey results show that at overall level, per thousand employed persons, 658 persons are working in the units employing less than 10 workers. About one fourth of the employed persons were not able to report the number of workers employed in the enterprise in which they are working.

Statement 5.2: Per thousand distributions of employed persons among units of different employment size

Employment size of the enterprise	**Rural + Urban**
Less than 10	658
10-19	32
20 & above	67
Not reported	243
All employment sizes	1000

EMPLOYMENT BY NATURE OF ENTERPRISE

The estimates of employed population are also classified into three categories of enterprises based on their nature of working viz. perennial, seasonal and ad-hoc.

It may be seen from statement 6.3 that 564 persons out of 1000 persons have reported working in perennial type of enterprises at overall level. In

seasonal and ad-hoc type of enterprises, 367 and 69 persons out of 1000 persons have respectively reported to be employed.

Statement 5.3: Employed persons by type of enterprise

Enterprise Type	**Rural + Urban**
Perennial	564
Seasonal	367
Ad-hoc	69
All Enterprises	1000

SOCIAL SECURITY BENEFITS

During the course of survey, the employed persons were also asked to reveal information on various benefits made available to them by their employer namely paid leave, social security benefits such as the provident fund, gratuity, health care, maternity benefits, pension, etc.

The survey results reveal that at overall level out of 1000 persons, 157 persons are getting paid leave or are eligible for paid leave. The industry wise break up shows that in community services group, a maximum of 443 persons out of 1000 persons are eligible for paid leave. On the other hand in agriculture, forestry & fisheries group, a minimum of 54 persons out of 1000 persons have reported paid leave at overall level.

In case of other social security benefits such as the provident fund, gratuity, health care & maternity benefits, pension etc., 163 persons out of 1000 persons have reported receiving some social security benefits in the enterprises in which they are employed. Again in community services group,

a maximum of 400 persons out of 1000 persons have reported social security benefits in the units in which they are employed. In agriculture, forestry & fishery group however a minimum of 82 persons out of 1000 persons have reported receiving social security benefits.

Chapter-VI

SAMPLE DESIGN & ESTIMATION PROCEDURE

SAMPLE DESIGN

A stratified multi-stage sampling design has been adopted for the employment-unemployment survey. The first stage units (FSU) are the 2001 census districts. The second stage units (SSU) are the 2001 census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. The ultimate stage units (USU) are households in both the sectors. In case of large SSUs i.e. villages/urban blocks requiring hamlet-group (hg)/ sub-block (sb) formation, one intermediate stage is the selection of two hgs/ sbs from each SSU.

Selection of First Stage Units (Districts): All the 593 districts (Census 2001) were first categorized into four size classes of population namely, less than 10 lakh, 10 lakh to less than 25 lakh, 25 lakh to less than 50 lakh and 50 lakh & more State-wise. From these four size classes, selection of districts was done from each State/UT by using the procedure which is as follows:-

(a) Strata/districts with 50 lakh & more population: Complete enumeration (no sampling of districts);

(b) Selection criteria for the other 3 strata/groups of districts in any given State/UT are as under:

- If total number of districts (N) in the frame is 2 or less, complete enumeration is done.

- In case N is 3 or more, sample size (n) for the stratum is arrived at as a pre-specified percentage of "N" (specified below) with the conditions that "n" is an even number and its minimum value is 2.

Strata/Districts population	Sample Size (n as % of N)
25 lakh to less than 50 lakh	75 %
10 lakh to less than 25 lakh	50%
Less than 10 lakh	25%

Once value of "n" is determined, required number (n) of sample districts from a stratum are selected by circular systematic sampling with PPS (size being the population of the district) in the form of 2 independent sub-samples after arranging the districts in ascending order of literacy rates.

Selection of SSUs: Within each selected district of a State/ UT, two basic strata have been formed: i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. Eight SSUs each from rural and urban stratum of a sample district are selected using circular systematic sampling as the circular systematic sampling is likely to give an evenly spaced sample which is essential for an accurate and precise estimate of the population mean.

Selection of hamlet-groups/ sub-blocks/ households

Large SSUs having approximate present population of 1200 or more was divided into a suitable number (say, D) of 'hamlet-groups' in the rural sector and 'sub-blocks' in the urban sector as stated below.

approximate present population of the sample village/block	No. of hgs/sbs to be formed (D)
Less than 1200 (no hamlet-groups/sub-blocks)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

For rural areas of Himachal Pradesh, Sikkim, Udhampur, Doda districts of Jammu & Kashmir and Idukki district of Kerala, the number of hamlet-groups formed are as follows.

approximate present population of the sample village/block	No. of hgs/sbs to be formed (D)
Less than 600 (no hamlet-groups)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

Two hamlet-groups (hg)/ sub-blocks (sb) are selected from a large SSU wherever hamlet-groups/ sub-blocks have been formed, by SRSWOR. Listing and selection of the households are done independently in the two selected hamlet-groups/ sub-blocks to be described as sample hg/ sb 1 and 2. The SSUs without hg/ sb formation will be treated as sample hg/ sb number 1.

Formation of Ultimate Stage Strata (USS) and allocation of households

All the households listed in the selected SSU/ hamlet-groups/ sub-blocks are stratified into three ultimate stage strata (USS) as given below:

Rural:

The three ultimate-stage-strata (USS) in the rural sector are formed in the following order:

USS 1: relatively affluent households

USS 2: from the remaining households, households having principal earnings from non-agricultural activities

USS 3: other remaining households

In rural areas a household is classified as affluent if

- it owns any of the items such as motor car/ jeep/ tractor/ combine-harvester/ truck/ bus/ van, consumer durables like fridge/ washing machine or spacious pucca house in good condition or
- a household whose member is a professional such as doctor/ advocate or has a high salaried job or
- the household owns 7 hectares or more cultivable land or 3.5 hectare or more irrigated land or
- Owns at least 10 heads of cattle.

Urban:

In the urban sector, the three ultimate-stage-strata (USS) are formed as under:

In the urban sector two cut-off points, say 'A' (Upper Point) and 'B' (Lower Point) of Monthly Per Capita Expenditure (MPCE) based on NSS 64th round data for each NSS region has been taken for determining the three strata. The, three ultimate-stage-strata (USS) are formed in the urban sector in the following order:

USS 1: households with MPCE more than A (i.e. MPCE > A)

USS 2: households with MPCE equal to or less than A but equal to or more than B (i.e. B<=MPCE<=A)

USS 3: households with MPCE less than B (i.e. MPCE < B)

The number of households to be surveyed in each SSU is 12 and the composition of USS with number of households to be surveyed is as follows:

USS	Composition of USS	No. of hhs to be surveyed	
		Without hg/sb formation	With hg/sb formation (for each hg/sb)
rural			
USS 1:	Relatively affluent households	2	1 (1)
USS 2:	Of the rest, households having principal earnings from non-agricultural activities	5	3 (2)
USS 3:	Other households	5	2 (3)

urban

USS 1:	households with MPCE > A	2	1 (1)
USS 2:	households with MPCE equal to or less than A but equal to or more than B (i.e. B <= MPCE <= A)	5	3 (2)
USS 3:	households with MPCE < B	5	2 (3)

Selection of households: From each SSS the sample households are to be selected by SRSWOR.

Sample Size:

From each SSU 12 households are to be surveyed. At All-India level 2400 rural SSU and 2394 urban SSU have been selected. Accordingly a sample of 57,528 households has been arrived at All-India level.

1. Estimation Procedure

Notations:

s= size class (s=1,2,3,4) of district

i= subscript for ith SSU (village (panchayat ward in Kerala)/UFS block) (i= 1 to 8)

r=subscript for a hamlet-group/sub-block (r=1,2)

j= subscript for jth ultimate stage stratum (uss) in an SSU/hg/sb (j=1,2,3)

k= subscript for kth sample household under a ultimate stage stratum in SSU/hg/sb

D= total number of hgs/sbs formed in the sample village (panchayat

ward)/block

D*= 1 if D=1

= D/2 for SSU if D>1

d= d-th district in a size class

Nd= total number of urban SSU in the dth urban district

Z= total size of the sth size class (rural/urban)

Zd= total size of the rural/urban district

z= size of the ith sample village/block

n= number of sample villages/UFS blocks in the dth district

H= total number of households listed in the ultimate stage stratum of a village/block of sample SSU

h= number of households surveyed in the ultimate stage stratum of a village/block of sample SSU

H_{i1j} = total number of households listed in jth stratum of ith sample village/UFS block

h_{i1j} = number of households surveyed in jth stratum of ith sample village/UFS block

H_{i2j} = total number of households listed in j-th stratum for subsample-2 of i-th sample village/UFS block

h_{i2j} = number of households surveyed in j-th stratum for subsample-2 of i-th sample village/UFS block

x,y= observed value of characteristic x,y under estimation

X, Y= estimate of population total X, Y for the characteristic x,y

Under the above symbols,

Ydirjk= observed value of the characteristic y for the kth household in the jth stratum of the rth hg/sb of the ith SSU belonging to the dth district.

Estimation formula for aggregates in Rural/Urban sector

Schedule (Listing)

Rural district: For estimating the number of households possessing a characteristic in the dth rural district:

$$\hat{Y}_d = \frac{Z_d}{n} \sum_{i=1}^{n} \frac{D_i^*}{z_i} \{y_{i1} + y_{i2}\}$$

Where y_{i1}, y_{i2} are the total number of households possessing the characteristic y in the hg's 1 & 2 of the ith SSU respectively.

y_i = 1 if it possesses the characteristic
= 0 otherwise

Urban district:

(i) For estimating the number of households possessing a characteristic in the dth urban district.

$$\hat{Y}_d = \frac{N_d}{n} \sum_{i=1}^{n} D_i^* \{y_{i1} + y_{i2}\}$$

Where y_{i1}, y_{i2} are the total number of households possessing the characteristic y in the sb 1 & 2 of the ith SSU respectively.

Schedule A: (Employment – Unemployment Survey Schedule)

Estimation formula for a rural District:

For all selected households in d[th] rural district:

$$\hat{Y}_d = \sum_{j=1}^{3} \frac{Z_d}{n_j} \sum_{i=1}^{n_j} \frac{D_i^*}{z_i} \left\{ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right\}$$

Estimation formula for an urban District:

For households selected in d[th] urban district:

$$\hat{Y}_d = \sum_{j=1}^{3} \frac{N_d}{n_j} \sum_{i=1}^{n_j} D_i^* \left\{ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right\}$$

Estimation formula at Size Class level:

Estimation formula for a rural size class:

For all selected households in s[th] rural size class:

$$\hat{Y}_s = \frac{Z}{n_d} \sum_{d=1}^{n_d} \frac{\widehat{Y_d}}{Z_d}$$

where

$\hat{Y}_s$= estimate of s[th] size class population total Y for the characteristic y

Estimation formula for urban size class:

For all selected households in urban size class:

$$\hat{Y}_s = \frac{Z}{n_d} \sum_{d=1}^{n_d} \frac{\widehat{Y_d}}{Z_d}$$

Overall Estimates of Aggregates at State/UT/all-India level:

The overall estimate $\hat{Y}$ at the State/UT/All-India level is obtained by summing the size class estimates belonging to the State/UT/all-India.

Chapter-VII

LIMITATIONS & LOOKING AHEAD

Limitations of the survey

1. The present survey on Employment-Unemployment is a thin sample survey. The survey results are based on the information collected from about 46,000 households covered across 28 States/UTs of the country.
2. The estimates at State/UT level are provided in proportions only due to thin sample size. Hence, the results for State/UT need to be derived and used cautiously.
3. In most of the States/UTs, data are collected through the regular employees of Labour Bureau and Contract Investigators recruited for a short period. An intensive training was imparted to all investigators. In each selected sample district, two officials of the Directorate of Economics & Statistics were appointed for supervision of field work and data scrutiny. However, it is possible that the probing skills of the newly appointed Contract Investigators may not be at par with the regular and experienced employees of Labour Bureau.
4. The unemployment rate in the present survey comes out to be significantly higher than the NSSO's previous rounds estimates. As per the present survey, the share of agriculture sector employment in the total employment is 45 per cent as compared to about 55 per cent share shown by NSSO estimate for the year 2007-08. While the shift of workforce from agriculture to other sectors is a positive trend of an emerging economy, the steep decline in share of agriculture employment estimated in the present survey may be due to lack of adequate probing skills of the Contract Investigators. This low share of agriculture sector

employment may have somewhat contributed to a higher unemployment rate estimated in the present Survey.

5. The Survey results are based only on the usual principal status approach to employment-unemployment. The other measures of employment- unemployment which capture intermittent unemployment and seasonality; namely Current Weekly Status (CWS) and Current Daily Status (CDS) approach could not be followed due to a shorter survey period.
6. Labour Bureau has only four regional offices (ROs). Effective co-ordination and supervision at the regional level for the present National level employment-unemployment household survey has been provided by these ROs.
7. An expert group was formed to discuss and finalize the schedules, sampling design, estimation procedure and tabulation plan of the survey. This group included experts from the NSSO, the Central Statistical Organization, the DGE&T and the Ministry of Labour and Employment. However, due to shorter period available with the Bureau for preparatory work and field work, wider consultations with other experts and stakeholders could not be carried out extensively.
8. The advice of the technical committee of the Ministry of Statistics & P.I. could not be taken because of the time limit provided for the Survey.
9. Labour Bureau conducts enterprise surveys on periodic basis. However, this was the first household survey conducted by the Bureau at the National level. There may have been some shortfalls on the conceptualization of the subject, designing of the schedules, sampling design, methodology etc. These would be adequately addressed in the future surveys.

Looking Ahead

1. In order to provide precise and robust estimates of proportions as well as of absolute figures at State/UT and National level, the sample size of the survey will be suitably increased in the future surveys.
2. In the current survey, 300 districts have been covered. The ultimate objective of this initiative is to cover all the districts in a phased manner.
3. The present survey provides estimates by Usual Principal Status approach only. The other measures of the employment-unemployment will be attempted in the future surveys after wider consultations with the experts on the subject.
4. The focus of the Government policies is to create skilled manpower in tandem with the requirement of the Industry, Trade and Services sectors. The employment schedules to be canvassed will be designed appropriately to capture the availability of skilled manpower in the country.
5. The migration of the labour force is proposed to be studied in the future surveys.
6. The data on underemployment will also be captured in the forthcoming surveys.
7. Different employment generating schemes are being implemented by the Central and the State/UT Governments to generate additional employment opportunities. The survey schedules will be designed suitably to capture data on the impact of the important employment generating schemes.
8. For further improving the quality of the estimates, training of the Investigators and other officials engaged in the survey will receive priority attention. Intensive training will be imparted to all personnel engaged in the Survey.
9. The estimates of employment-unemployment will be attempted for various social groups and minorities as well.

10. The survey schedules will be designed appropriately to capture information on contract category of workers and home based workers in the future surveys.

ANNEXURE-I

Composition of Group of Experts for Designing the Questionnaires and for finalisation of Sample Design & Estimation Procedure in respect of the Employment-Unemployment Survey of Labour Bureau.

Sh. Ramesh Kolli, Additional Director General, Central Statistical Organisation, New Delhi	Chairman
Sh. G.C.Manna, Deputy Director General, Survey Design & Research Division, NSSO, Kolkata.	Member
Sh. T.K. Saha, Deputy Director General, Data Processing Division (DPD), NSSO, Kolkata.	Member
