FOREWORD

The experience of countries that succeeded in reducing poverty significantly indicates the importance of high rates of economic growth in achieving this. High growth, however, is not a sufficient condition for poverty reduction; the pattern and sources of growth as well as the manner in which its benefits are distributed are equally important from the point of view of achieving the goal of poverty reduction. In this context, employment plays a key role in all developing countries. Indeed, countries which attained high rates of employment growth alongside high rates of economic growth are also the ones who succeeded in reducing poverty significantly.

Labour Bureau has been entrusted the task of conducting Annual Employment-Unemployment Survey in the country. The first survey was conducted in 28 States/UTs by covering 300 districts in the country during the year 2010. The second and third Annual Employment-Unemployment Survey was more comprehensive in terms of coverage as well as parameters estimated. These surveys were conducted in all the States/UTs by covering all the districts in the country.

The present Fourth Annual Employment-Unemployment Survey has been conducted during the period January, 2014 to July, 2014 in all the 36 States/UTs by covering all the districts in the country. A moving reference period of last twelve completed months from the date of survey is used to derive various estimates of labour force and its derivatives.

Considering the importance of the labour force parameters and demands from quarters, the results of the Fourth Annual Employment-Unemployment Survey report 2013-14 is being brought out in **Five Volumes**.

Volume-I titled " Employment-Unemployment Scenario 2013-14" deals with important parameters namely Labour Force Participation Rate, Worker Population Ratio, Unemployment Rate based on Usual Principal Status Approach and Usual Principal & Subsidiary Status Approach,

distribution of employed persons by different activity, extent of underemployment etc.

Volume-II titled "Youth Employment-Unemployment Scenario 2013-14" deals with Labour Force Participation Rate, Worker Population Ratio, Unemployment Rate etc. for different age groups viz. 15-17 years, 18-29 years and 30 Years & above.

Volume-III titled "Education, Skill Development and Labour Force 2013-14" deals with persons attained vocational training and main activity pursued, distribution of persons by educational level and main activity, type of formal and non-formal training attained etc.

Volume-IV titled " Employment in Informal Sector and Conditions of Informal Employment 2013-14" deals persons receiving various social security benefits, paid leave, type of job contract etc for all States/UTs by Gender/Sector.

Volume-V titled "Employment-Unemployment Scenario among different Social Groups 2013-14" deals with the labour force related parameters and its derivatives for various social groups.

In addition considering the demand of district level estimates for decentralized planning, Bureau has worked with Five States/UTs of Maharashtra, Telangana, Tamil Nadu, Andhra Pradesh and Puducherry. These States/UTs have covered matching sample along with Labour Bureau main survey. After pooling the sample, the district level estimates for these States/UTs are also a part of Fourth Annual Employment-Unemployment Survey 2013-14.

There have been many hurdles in completing the survey on time. Despite all such hurdles, the survey was successfully completed and report released due to single-minded dedication of the staff and officers of the Labour Bureau. A number of State Governments provided their staff for canvassing the schedules and also supervising the survey. Without such support and co-operation from the State Governments it was very difficult to undertake such survey.

I would like to express my deep appreciation for the constant support received from the State Governments, especially their Directorates of Economics & Statistics (DES), despite the acute shortage of staff and officers faced by them. My thanks are also due to the National Sample Survey Office (Field Operation Division) for timely making available the Urban Frame Survey maps of the sample urban blocks for use in the survey.

The Expert Committee set up under the able Chairmanship of Prof. S. P. Mukherjee meticulously designed the sample design, schedules and instruction manuals and deliberated at length the findings of the survey at various stages. This report is the product of the efforts put in by the Committee members, in general and Prof. S. P. Mukherjee in particular. Without his constant guidance and enthusiasm the survey would not have progressed at such a pace. I have no hesitation in admitting that the errors or inadequacies in the Report are however entirely due to the limitations of the Labour Bureau. Last but not the least Labour Bureau is grateful to the Ministry of Labour and Employment for reposing its faith in the Labour Bureau to conduct such a massive exercise at All-India level.

Report on Fourth Annual Employment - Unemployment Survey

Volume I

Foreword

Executive Summary		i-vi
Chapter-I	Introduction	1-12
Chapter-II	Household Characteristics	13-19
Chapter-III	Labour Force Estimates	20-35
Annexure I	Concepts and Definitions	1-7
Annexure II	Sampling Design & Estimation Procedure	8-15
Annexure III	Projected Population	1-2
Annexure IV	Tables (1 to 18)	1-129
Annexure V	Constitution of Expert Group	i-ii

List of Tables

Table (1)	Number of villages/UFS blocks allocated and actually surveyed for each State/UT	1
Table (2)	Number of households and persons surveyed for each State/UT	2
Table (3)	Per 1000 distribution of households (hhs) by members aged 15 years & above	3-5
Table (4)	Per 1000 distribution of households (hhs) by social group for each State/UT	6-8
Table (5)	Per 1000 distribution of households (hhs) benefited from employment generating schemes for each State/UT	9-13
Table (6)	Per 1000 distribution of households (hhs) by number of employed persons aged 15 years & above for each State/UT	14-16
Table (7)	Per 1000 distribution of households (hhs) by number of wage/salaried persons aged 15 years & above for each State/UT	17-19
Table (8)	LFPR, WPR, UR and PU (per 1000) for persons aged 15 years & above according to Usual Principal Status Approach (ps) for each State/UT	20-23
Table (9)	LFPR, WPR, UR and PU (per 1000) for persons aged 15 years & above according to Usual Principal & Subsidiary Status Approach (ps+ss) for each State/UT	24-27
Table (10)	Per 1000 distribution of workers aged 15 years & above by broad activity according to Usual Principal Status Approach (ps) for each State/UT	28-36
Table (11)	Per 1000 distribution of workers aged 15 years & above by broad activity according to Usual Principal & Subsidiary Status Approach (ps+ss) for each State/UT	37-45
Table (12)	Per 1000 distribution of workers aged 15 years & above by Industry Division NIC 2008 according to different approaches at All India level	46-63
Table (13)	Per 1000 distribution of workers aged 15 years & above by Industry Section based on NIC 2008 according to Usual Principal Status Approach (ps) for each State/UT	64-72
Table (14)	Per 1000 distribution of workers aged 15 years & above by Industry Section based on NIC 2008 according to Usual Principal & Subsidiary Status Approach (ps+ss) for each State/UT	73-81
Table (15)	Per 1000 distribution of workers aged 15 years & above by Occupation Divisions based on NCO 2004 according to Usual Principal Status Approach (ps) for each State/UT	82-90
Table (16)	Per 1000 distribution of workers aged 15 years & above by Occupation Divisions based on NCO 2004 according to Usual Principal & Subsidiary Status Approach (ps+ss) for each State/UT	91-99
Table (17)	Percentage distribution of workers aged 15 years & above available for 12 months but actually worked according to Usual Principal & Subsidiary Status Approach (ps+ss) for each State/UT	100-120
Table (18)	Distribution of workers aged 15 years & above by number of months available and average number of months actually worked according to Usual Principal Status Approach (ps) for each State/UT	121-129

EXECUTIVE SUMMARY

INTRODUCTION

- The Present Report is the Fourth Annual Employment-Unemployment Survey 2013-14 conducted by Labour Bureau.
- The survey has been conducted in all the States/UTs by covering all the districts.
- The field work executed from January, 2014 to July, 2014.
- A total sample of 1,36,395 households has been covered with a break up of 83,385 households in the rural sector and 53,010 households in the urban sector.
- From the households covered, 6,80,392 members were surveyed, out of which 4,20,239 respondents reside in rural households and rest 2,60,153 in urban households.
- The survey results are presented in five volumes namely
 - i. Employment - Unemployment Scenario 2013-14;
 - ii. Youth Employment - Unemployment Scenario 2013-14;
 - iii. Education, Skill Development & Labour Force 2013-14;
 - iv. Employment in Informal Sector & Conditions of Informal Employment 2013-14;
 - v. Employment-Unemployment Scenario among different Social Groups 2013-14.
- Labour Force Estimates are derived for two approaches namely Usual Principal Status (UPS) Approach and Usual Principal and Subsidiary Status (UPSS) Approach.
- A moving reference period of last twelve months from the date of survey was used to derive the estimates based on Usual Principal Status (UPS) Approach and Usual Principal and Subsidiary Status (UPSS) Approach.

- All the Labour Force related tables are generated State/Gender/Sector/Social Group wise.
- All the Labour Force Estimates are derived for persons aged 15 years and above only.

LABOUR FORCE AND WORKER-POPULATION RATIO

- Labour Force Participation Rate (LFPR) is estimated to be 52.5 per cent under the UPS approach at All India level or in other words 52.5 per cent of the persons aged 15 years and above was either working or seeking work during the reference period.
- In the rural sector, the LFPR is estimated to be 54.7 per cent whereas in the urban sector the LFPR is 47.2 per cent under the UPS approach.
- Female LFPR is significantly lower as compared to LFPR among males. At All India level, female LFPR is estimated to be 25.8 per cent as compared to 74.4 per cent for males.
- LFPR for different categories based on UPS approach is as below:

Sector	<i>(in per cent)</i>		
	Male	Female	Person
Rural	74.7	29.1	54.7
Urban	73.8	18.5	47.2
Rural + Urban	74.4	25.8	52.5

- The Worker Population Ratio (WPR) is estimated to be 49.9 per cent at All India level under the UPS approach or in other words about 50 per cent of the persons aged 15 years & above are employed.
- In rural areas, the WPR is estimated to be 52.1 per cent under the UPS approach as compared to 44.6 per cent in the urban areas.

- The female WPR is estimated to be 23.8 per cent at All India level under the UPS approach as compared to the male WPR of 71.4 per cent.

THE EMPLOYMENT-UNEMPLOYMENT SITUATION

- The unemployment rate is estimated to be 4.9 per cent at All India level under the UPS approach or about 5 per cent of the persons aged 15 years and above who were available for work could not get work during the reference period.
- In rural areas, unemployment rate is 4.7 per cent whereas in urban areas, the unemployment rate is 5.5 per cent under the UPS approach.
- The unemployment rate is significantly higher among females as compared to that among males. At All India level, the female unemployment rate is estimated to be 7.7 per cent, whereas for males this rate is 4.1 per cent (under the UPS approach).
- In urban areas, the female unemployment rate is estimated to be 12.4 per cent at All India level under the UPS approach.
- The unemployment rate for different categories based on UPS approach is given below.

(in per cent)

Sector	Male	Female	Person
Rural	4.2	6.4	4.7
Urban	3.9	12.4	5.5
Rural + Urban	4.1	7.7	4.9

To get a better picture about the Employment situation, it will be useful to look at the distribution of workers or employed persons according to the nature of their employment

- Majority of the employed persons are found to be self employed based on both the UPS and UPSS approach.
- At all India level, 49.5 per cent persons are estimated to be self employed under the Usual Principal Status Approach followed by 30.9 per cent as casual labour. Only 16.5 per cent were wage/salary earners and the rest 3.0 per cent covered contract workers.
- Employed persons are further classified on the basis of economic activity pursued by them. At the State/UT level, results are presented at Section level (Section A-U) based on National Industrial Classification, 2008.
- The survey results show that majority of the persons are employed in the primary sector. Under Agriculture, Forestry and Fishing sector, 46.9 per cent persons are estimated to be employed at All India level based on Usual Principal Status Approach.

It is pretty well-known that many of the persons who are reported as ‘ employed’ or ‘workers’ in official publications do not get work for the entire duration of their stay in the Labour Force. And even those who get some work or the other for the entire duration may be getting work for only a small fraction of the time they are available for work. This apart, some may be working on jobs which do not allow them to fully utilise their abilities or from which they earn very low incomes. All this constitutes under-employment which remains a worrying aspect of the employment –unemployment scenario in the country.

For the first time in any nation-wide sample survey, an attempt was made in this round of the Annual Employment-Unemployment Survey to work out some estimates of under-employment, considering only the duration of work available to participants in the Labour Force.

- Only **60.5** per cent of persons aged 15 years and above who were available for work for all the 12 months during the reference period were able to get work throughout the year, at All India level.
- In rural areas, only **53.2** per cent of persons aged 15 years and above who were available for 12 months during the reference period were able to get work throughout the year at All India level.
- The estimates of underemployment are compiled separately for self employed, wage/salaried earners, contract and casual workers. The underemployment for various categories are given below.

Percentage distribution of persons available for 12 months according to the duration of their work

Group	Self Employed	Wage/Salaried	Contract	Casual
Worked for 12 months	63.4	92.9	71.5	42.1
Worked for 6-11 months	35.3	6.9	27.3	56.2
Worked for 1-5 months	1.3	0.1	1.2	1.6

- Figures in the first row speak for themselves. Full employment (judged only by the period during which the so-called employed persons could get work) was available to only 63.4 per cent of self-employed persons, the figure being as low as 42.1 among ‘casual’ workers.

- About 4 per cent of the persons aged 15 years and above who were available for 12 months during the reference period could not get any work even for a single month during the reference period.

Another important finding of the present round related to the distribution of households according to the number of employed members in them

- In about 5 per cent of the households, there are no workers aged 15 year and above, based on Usual Principal Status Approach.
- About 46 per cent of the households are having only one worker.
- In about 78 per cent of households, there are no wage/salary earning members.
- About 17 per cent of the households are having one wage/salary earning member. In urban areas, about 30 per cent of the households are having one wage/salary earner whereas in rural areas, it is 12 per cent.

CHAPTER I

INTRODUCTION

Significance of Employment Statistics

1.1 The experience of countries that succeeded in reducing poverty significantly indicates the importance of high rates of economic growth in achieving this. High growth, however, is not a sufficient condition for poverty reduction; the pattern and sources of growth as well as the manner in which its benefits are distributed are equally important from the point of view of achieving the goal of poverty reduction. In this context, employment plays a key role in all developing countries. Indeed, countries which attained high rates of employment growth alongside high rates of economic growth are also the ones who succeeded in reducing poverty significantly.

1.2 Employment-Unemployment Statistics is an important input for policy and planning purposes. After the advent of recent Global

Economic Slowdown and its impact on employment in different countries, including India, the importance of Employment-Unemployment Statistics on regular & frequent intervals has increased manifold. India is one of the fastest growing economies in the world. The rapid growth in the Gross Domestic Product in the last decade shows the transition of our economy from agriculture domination to manufacturing and tertiary sectors. Rapid growth is essential for expanding incomes and employment, but growth is not only the measure of development. The ultimate objective is to achieve broad based improvement in the living standards of our people. One of the indicators of this broad based improvement is to provide gainful employment opportunities to the working class population.

1.3 In the policy context the most critical factor that impinges on labour supply is the Labour

Force Participation Rate (LFPR) as it is commonly known. The Labour Force Participation Rate is a measure of the proportion of a country's working-age population that engages actively in the labour market, either by working or looking for work. It provides an indication of the relative size of the supply of labour force available to engage in the production of goods and services. The breakdown of the labour force by sex and age group gives a profile of the distribution of the economically active population within the country. A careful assessment of how many new workers will enter the labour force is a prerequisite to design demand side policy interventions for gainfully absorbing these numbers in the economy. Moreover, the indicator for Labour Force Participation Rate plays a central role in the study of the factors that determine the size and composition of a country's human resources.

1.4 Based on the present or Fourth Annual Employment-Unemployment Survey Report

2013-14, LFPR according to Usual Status Approach (Principal Status + Subsidiary Status) is estimated to be about 56 per cent at National level. In comparison, LFPR is reported to be nearly 74 per cent in China, 67 per cent in Canada, 64 per cent in United States of America, 62 per cent in United Kingdom and 60 per cent in Japan. Low LFPR primarily implies high dependency ratio. The development experience suggests a strong negative correlation between dependency and growth, that is, lower dependency ratios increase growth and higher growth rate leads to lower dependency ratios.

ILO Resolution Concerning Labour Statistics

1.5 One of the important resolutions which was made in 19th International Conference of Labour Statisticians (ICLS) held at Geneva, 2-11 October, 2013 is that each country should aim to develop its system of work statistics, including of the labour force, to provide an adequate information base for the various users of the statistics, taking

account of specific national needs and circumstances. Thus, it is more important to understand the uses and the users/interest groups of labour statistics.

1.6 In India, the main users/interest groups who make use of the employment statistics are policy makers and administrators, research workers, media, workers' organisations and employers' associations, international agencies, etc. Thus, it is not only the Ministry of Labour & Employment and some other welfare ministries and departments responsible for making labour policy and laws and their implementation, but agencies engaged in planning socio-economic development, particularly, the Planning Commission become other major users of employment statistics on different aspects of labour. The other important resolution includes that a system should be designed to monitor labour markets and labour underutilization including unemployment, implementation and evaluation of economic and

social policies and programmes related to employment creation, income generation, skills development including vocational education and training, and related decent work policies.

Employment Statistics in India

1.7 Labour Statistics are collected, compiled and disseminated by several agencies in India. Ministry of Labour and Employment is one of the most important sources of labour statistics in India. It collects labour statistics through the offices of Labour Bureau, Directorate General of Employment and Training (DGE&T), Directorate General of Labour Welfare (DGLW) and Directorate General Factory Advice Service & Labour Institutes (DGFASLI). Ministry of Statistics and Programme Implementation is the other major source which collects and publishes the data through two important organisations viz. the Central statistical Organisation (CSO) and the National Sample Survey Organisation (NSSO). Besides these two, State

governments also collect labour statistics, mostly through the Department of Labour & Directorate of Economics & Statistics.

1.8 Labour Force Surveys primarily provide estimates of Labour Force Participation Rate, Worker Population Ratio and Unemployment Rate. These estimates are amongst the important measures of performance of an economy. Besides, they also provide descriptive data by social groups, sex, age, education, rural/urban sector, industry, occupation and type of activity. Different levels of Government use these data for evaluation, planning and design of employment programs and social safety net programmes for persons with a particular employment attribute. Besides this, labour market analysts, economists, consultants, planners, forecasters and academics in both the private and public sector also use this data for research purposes.

Main Characteristics of the present survey

1.9 The current Employment - Unemployment Survey is the fourth in the series providing annual results of the status of labour market in India. The survey covers the entire country. The field work of the survey was launched in January, 2014. In majority of the States/UTs the field work was completed by June, 2014. The estimates of the Labour Force parameters and its derivatives are generated at State/UT/All India level.

1.10 Considering the importance of Labour Statistics and its use by different agencies, it has been decided to bring five volumes catering to the demand of different Users. The five different volumes are as follows.

- A. Employment - Unemployment Scenario 2013-14
- B. Youth Employment - Unemployment Scenario 2013-14
- C. Education, Skill Development & Labour Force 2013-14

D. Employment in Unorganized Sector & Social Security Benefits 2013-14

E. Employment-Unemployment Scenario among different Social Groups 2013-14

Informal Sector

1.11 The Indian Economy is characterized by the existence of a vast majority of informal or unorganized labour employment. More than 90 per cent of workforce and about 50 per cent of the national product are accounted by the informal economy. A high proportion of socially and economically underprivileged sections of society are concentrated in the informal economic activities. Under the changed circumstances where informal sector is increasingly interlinked with the formal and plays pervasive role in the economy and in the livelihoods of the people, it is imperative to improve the information base of the sector. It is necessary to build a comprehensive statistical base on various dimensions of the informal economy as an integral

part of the national statistical system.

1.12 Unorganized sector or informal economy is replete with diverse concepts and lack uniformity of definitions. The first step in building database on informal sector is to arrive at definitions that reflect the specific characteristics, and to adopt these definitions for unambiguous identification of the various components of the sector. Further, it is desirable to specify the core statistics relating to unorganized sector that needs to be collected and disseminated with certain regularity as a part of an ideal statistical system that would ensure reliability and credibility. Based on some of the specific characteristics which distinguish the unorganised enterprises from formal sector like no paid leave, no written job contract, and no social security benefits to the workers, etc, information has been collected in the present survey with special reference to informal sector. In the current survey, a beginning has been made to assess the size,

structure and characteristics of the informal sector in the labour market with the available information.

Youth Employment

1.13 In its report in 2013, ILO had estimated that nearly 75 million youth were unemployed around the world and global youth unemployment rate was projected at 12.7 per cent. The Report further suggests that in comparison with adults, youth continue to be almost three times as likely to be unemployed, and unemployment rates affect them disproportionately.

1.14 Echoing these concerns, the Economic Survey suggests that if the increase in the number of working age individuals can be fully employed in productive activities, the level of average income per capita should increase as a result. The youth bulge will become a demographic dividend. However, if a large cohort of young people cannot find employment and

earn satisfactory income, the youth bulge will become a demographic bomb, because a large mass of frustrated youth is likely to become a potential source of social and political instability.

1.15 It is generally believed that unemployment rates are naturally higher for young people because of their limited work experience and poor employability due to deficit in educational attainment and limited opportunities. Approach Paper to the Twelfth Plan gives a high priority to employment of youth through quality education and skill development. For growth to be inclusive it must create adequate livelihood opportunities and add to decent employment commensurate with the expectations of a growing labour force.

1.16 In the Third Annual Employment-Unemployment Survey a first step was taken to estimate employment structure of various age groups 15-24 years, 18-29 years and 15-29 years to

assess the extent of unemployment, broad activity by educational qualifications and kind of activities the youth are pursuing across different states. The striking feature of youth employment in the third Employment Survey was that a relatively high share of youth was engaged in unpaid family work or helper, starting their working life supporting (informal) family businesses or farms and very few were self employed or entrepreneurs. This attribute has important policy implications for developing youth oriented programmes for skills up gradation, knowledge enhancement and access to capital for youth. In the Fourth Annual Employment-Unemployment Survey 2013-14 also, a separate report on “Youth Employment-Unemployment Scenario 2013-14” has been prepared.

Skill Development

1.17 Skills and knowledge are the driving forces of economic growth and social development for any country. Countries with

higher and better levels of skills adjust more effectively to the challenges and opportunities of world of work. Potentially, the target group for skill development comprises all those in the labour force, including those entering the labour force for the first time, those employed in the organized sector and those working in the unorganized sector. As discussed in the foregoing paragraphs, India with a large and young population has a great demographic advantage. The proportion of working-age population is likely to increase in the coming years. While this provides opportunities, it also poses challenges. Policymakers have to design and execute development strategies that target this large young population. Demographic advantage is unlikely to last indefinitely. Therefore timely action to make people healthy, educated, and adequately skilled is of paramount importance. Government's priority area is to address the employability issue by initiating a multi-skills development programme in

mission mode and focussing on job creation and entrepreneurship, in both rural and urban areas. Therefore in order to achieve these above mentioned goals, a reliable statistical base on skill development should be developed. Keeping these things in mind, during the fourth Annual Employment-Unemployment Survey specific information on vocational training acquired by persons aged 15 years and above, work profile of persons acquired training etc. was collected. Based on data collected, a separate report is prepared focussing on vocational training and skill development.

Social Groups

1.18 During the previous Annual Employment-Unemployment Surveys, the various Labour Force parameters were derived separately for social group wise. In the current survey also, information has been collected for different social groups in order to understand the outreach of different Central and State

government schemes to the targeted population. Accordingly, information is collected on various social groups as part of the Fourth Annual Employment - Unemployment Survey. The information so collected is compiled and produced as separate report.

District-level Estimates

1.19 The National data complimented with district level data on employment related parameters is an important input to take decisions for decentralized planning. District is a basic unit of planning. Due to non-availability of data at district level for most of the characteristics, the estimates at State/UT level are used as a proxy for policy and plans at district level. During the third Annual Employment-Unemployment Survey 2012-13, estimates at district level were started on pilot basis for the State of Andhra Pradesh. For deriving estimates at district level, the State Government had covered matching sample along with labour Bureau main survey.

By pooling the central and state sample, district level estimates for the state of Andhra Pradesh were prepared. During the fourth round, the district level estimates are proposed to be generated for about 120 districts in the country. As part of this survey, four States namely Andhra Pradesh, Telangana, Tamil Nadu and Maharashtra had expressed their desire to have district level estimates of employment data. Labour Bureau acceded to their request and provided all the technical guidance in selection of rural/urban sample, training to the enumerators/supervisors and supply of blank schedules etc. All the four States have covered matching sample along with Labour Bureau and completed the field work. The data for the district level samples has been processed to derive district level estimates by Labour Bureau.

Data Collection

1.20 To ensure optimal utilization of available resources, Directorates of Economics and Statistics of all the States/UTs were requested to undertake data

collection in their respective States/UTs. Out of 36 States/UTs, 22 States/UTs agreed and undertook the fieldwork on behalf of Labour Bureau. In the remaining States/UTs Labour Bureau engaged about 400 contract investigators to complete the fieldwork. Labour Bureau provided extensive training to State officials and contract staff through interactive sessions and workshops to familiarize them with the methodology, concepts and definitions and the practical aspects of the field work.

Supervision

1.21 Usefulness of data depends upon its quality and adherence to the methodology adopted for the survey. Labour Bureau adopted a three-tier supervision of fieldwork to ensure that the data collected is consistent with the agreed definitions and concepts used in the questionnaire. All the States/UTs agreed to perform first level scrutiny by the officials of Directorate of Economics and Statistics in their respective States. The objective of first level

scrutiny is to ensure that sample units are correctly identified; households are listed properly; formation of hamlet groups and sampled households are selected using the prescribed statistical procedure and techniques. Supervisors are also expected to ensure that codes for status, activity, industry group and occupation are consistent with the responses through random field level inspections and verification of data recorded by the investigators.

1.22 The second tier of scrutiny is carried out through 120 supervisors engaged on contract basis. They are expected to check the reported data for overall consistency and uniformity. In many cases they are also deployed to field to perform surprise inspections and work alongside the contract investigators in clarifying their doubts and helping investigators in collecting the data. The supervisors carried out number of inspections in different States/UTs in the sample First Stage units to check the filled in

schedules for authenticity, consistency etc.

1.23 In the third tier of supervision, Labour Bureau deputed its own regular officials to verify the quality of data collected. In addition, four consultants have also been hired on contract basis to undertake random scrutiny of schedules and provide day-to-day guidance to field staff and supervisors. Any discrepancies observed at this level were referred back for necessary rectifications at the field.

Major Changes/improvements from earlier surveys

1.24 The methodology followed in selecting the sample and coverage in the current survey is almost similar to the Third Annual Employment–Unemployment Survey. The details of the selection of first stage unit, sample household etc. is in detailed at the Annexure for “Sampling Design & Estimation Procedure”. However, based on the experience and the inputs and comments received from the

stakeholders, certain changes have been made in the current survey. Questionnaire used for collecting the data has been modified and simplified to improve accuracy and reliability of data. More focus has been given to the informal set of workers and vocational training acquired by the persons. Specific blocks have been prepared for capturing this set of data after conducting pilot surveys.

1.25 The past experience suggests that selecting households in second stage sampling was less than satisfactory because investigators do not have knowledge, skills and experience of sampling tools and random numbers. The training module for imparting these skills was simplified in the current survey and higher proportion of time was spent on this aspect of training by organizing mock exercises and workshops. This has resulted in significantly better quality of data in the current survey.

Limitations and future challenges

1.26 As suggested elsewhere, credibility of any survey depends upon the accuracy tested over a period of time and general acceptance of the results by the users of information. Unlike the more institutionalized surveys conducted by National Sample Survey Office (NSSO) that tend to establish relationship between expenditure and employment, purpose of annual employment surveys carried out by Labour Bureau is primarily to assess and estimate the structure and composition of labour force and provide the data to various users on regular basis. Within this broad framework, there are certain shortcomings that need to be overcome in following rounds.

1.27 The current methodology is unsuitable for measuring under-employment, disguised employment and seasonality of labour force. Likewise it also does not capture the migration aspects of employment. Further, there are reasons to feel that the survey should be more sensitive

to gender attributes to capture the true and fair value of contribution made by females.

1.28 Survey of this magnitude conducted every year puts great deal of strain on available resources. There is a need to relook the methodology of sample size and household selection to optimize the available resources without compromising the quality and accuracy of the results. It is assessed that approximately one half of the total time required for survey is attributed to stratification related work and listing of households.

1.29 Labour Bureau is following a conventional approach of canvassing paper-based questionnaires. Approximately

1.5 million A4 size sheets are used in these surveys. It is right time to “Go Green” by using hand-held electronic devices for collecting information. Apart from reducing the non-sampling errors, these devices would also help to significantly reduce the processing time.

Constitution of the Expert Group

1.30 Ministry of Labour & Employment constituted an expert group under the Chairmanship of renowned Statistician Prof. S.P. Mukherjee with other experts on the subject as members, to finalize the questionnaires, sampling design, instruction manual & other technical details of the survey. Composition of the Expert group is annexed.

CHAPTER-II

HOUSEHOLD CHARACTERISTICS

Introduction

2.1 During the Fourth Annual Employment-Unemployment Survey information has been collected on some important household characteristics. This includes information on household size, households by social group, households benefitted from different employment generating schemes, number of employed persons in the household and households by number of wage/salaried persons. The findings of the survey on these parameters are discussed in the ensuing paragraphs.

2.2 The survey has been conducted in all the 36 States/UTs including the newly created Telangana State by covering all the districts in the country. A sample size of 1,36,395 households spread across 36 States/UTs have been covered of which 83,385 households belong to the rural sector and the rest 53,010

households to the urban sector. A total of 5,04,802 persons aged 15 years and above have been surveyed out of which 3,02,482 reside in the rural sector sample households and rest 2,02,320 persons in the urban sector sample households covered during the survey.

Members aged 15 years and above in a household

2.3 The second stage stratification under the survey to select the sample household is based on number of members aged 15 years and above in the household. The households studied under the survey have been classified based on the number of members aged 15 years and above in the household. Accordingly, all the households under study are put in four categories as follows:

1. Up to 1 member household;
2. 2-3 members' household;
3. 4-5 members' household;
4. 6 & above members' household.

2.4 The results show that at All India level about 52 percent of

the households are having 2-3 member's aged 15 years and above followed by 32 per cent of the households having 4-5 member's aged 15 year and above. In case of 6 & above members aged 15 years and

above, there are about 12 per cent households at overall level. The State-wise distribution of households by members aged 15 years & above is presented in Tables 3, 3.1 and 3.2 (Annexure IV).

Table 2.1: Distribution of households by members aged 15 years and above (in %)

Particulars	1 member	2-3 members	4-5 members	6 & above members
Rural	4.3	51.6	31.7	12.3
Urban	4.4	52.3	33.4	9.9
Rural + Urban	4.3	51.8	32.2	11.6

2.5 At sector level i.e. rural and urban sector also, similar types of result as observed at by combining rural and urban sector are visible. The results are important in the sense that it provides working age persons in

the households at States/UTs level. The results derived will also help in deciding the sample size in each stratum in the forthcoming Annual Employment-Unemployment survey.

Figure 1: Distribution of Households by members aged 15 years & above

Social Groups

2.6 The households are classified based into four social groups, viz., Scheduled Castes, Scheduled Tribes, Other Backward Classes and Other category. The State-wise distribution of households among different social groups is presented in Tables 4, 4.1 and 4.2 (Annexure IV).

2.7 The survey results show that at All India level, about 41 per

cent of households belong to Other Backward Classes category followed by 30 per cent under the Others category, 19 percent under the Scheduled Castes category and the rest about 10 percent households under the Scheduled Tribes category. Table 2.2 shows the distribution of the households among different social groups in rural, urban and rural + urban sectors.

Table 2.2: Distribution of households by Social Groups (in %)

Social Group	Rural	Urban	Rural + Urban
Scheduled Castes	21.3	13.0	18.8
Scheduled Tribes	11.8	4.5	9.6
Other Backward Classes	41.6	40.0	41.1
Others	25.3	42.4	30.4

2.8 In the rural sector, a trend, similar to the one observed at the All India level (rural + urban) is visible. In rural areas the proportion of households under Other Backward Classes category is highest with 41.6 per cent followed by 25.3 per cent under the Others category, 21.3 per cent under the Scheduled Castes

category and the rest 11.8 per cent under the Scheduled Tribes group.

2.9 In case of urban sector, the Others category households have maximum proportion (42.4 per cent) followed by 40 per cent households under the Other Backward Classes category, 13 per cent households under the

Scheduled Castes category and 4.5 percent households come

under the Scheduled Tribes category at All India level.

Figure 2: Distribution of households by social group

Households Benefitted from Employment Generating Schemes

2.10 In the current survey a special block was canvassed to ascertain the information from the households regarding members of the household benefitted from important employment generating schemes during the reference period. The results thrown out by the survey will help Central and State government agencies to assess the progress made in the schemes so far and take corrective action so that the benefits of the schemes can be

reached to the targeted population. The results show that about 26 per cent of the households are benefitting from either of the employment guarantee schemes at overall level. Among the benefitted households, more than 90 percent are benefitted from MGNREGA scheme which is implemented in only rural areas. The results are compiled separately for various Social Groups for each State/UT in Table 5, 5.1, 5.2 5.3 and 5.4 (Annexure IV).

Figure 3: Households benefitted from Employment Schemes

Households by number of employed persons

2.11 These special tables are attempted first time in the fourth Annual Employment-Unemployment Survey Report. Households are categorised according to the number of employed persons based on Usual Principal Status approach in that household. For that, all the households are grouped in five categories as follows:

- 1) None (no family member is employed);
- 2) 1 person employed households;
- 3) 2 persons employed households;
- 4) 3 persons employed households;

- 5) 4 & above employed households

2.12 Table 2.3 shows that about 46 per cent of the households are having only one person as employed/earner followed by households with 2 employed persons (31 percent). At overall level, households with 3 employed persons constitute 12 percent and households with 4 employed persons and more constitute only 6 percent of the households. It is also evident from the table that around 5 percent of the households does not have even a single employed person/earner.

Table 2.3: Distribution of households by number of employed persons aged 15 years and above (in %)

Head	None	1 person	2 persons	3 persons	4 & above persons
Rural	4.1	42.6	33.4	12.7	7.2
Urban	5.7	54.8	27.1	9.1	3.3
Rural + Urban	4.6	46.3	31.5	11.6	6.1

2.13 The same trend is visible in both rural and urban areas also where; households with 1 employed person constitute higher proportion followed by households with 2 employed persons. In urban areas, the

proportion of households with 1 employed person is significantly higher (about 55 per cent) when compared to other types of households. These special tables are compiled separately for various social groups also.

Figure 4: Distribution of households by no. of Employed Persons

Households by Number of Wage/Salaried Persons

2.14 This table is also compiled first time under the Fourth Annual Employment-Unemployment survey. In this table, information is compiled for

number of wage/salaried persons aged 15 years and above in a household based on Usual Principal Status approach. Households are classified into four categories namely i) no wage/salaried person in the

household, ii) One wage/salaried person, iii) Two wage/salaried persons and iii) Three

wage/salaried persons & more in the household.

Table 2.4: Distribution of households by number of wage/salaried persons aged 15 years and above (in %)

Head	None	1 Person	2 Persons	3 Persons
Rural	85.2	12.0	2.4	0.4
Urban	60.4	29.9	7.9	1.8
Rural + Urban	77.8	17.4	4.0	0.8

2.15 It is clearly evident from the Table 2.4 that at All India level, about 78 per cent of the households reported to be having no wage/salaried person in their households. It shows the high informality in the employment

situation in the country. In rural areas, the situation is still worse when compared to urban areas. It is found from the table that more than 85 per cent of the households in rural areas having no wage/salaried person.

Figure 5: Distribution of households by number of Wage/Salaried Persons

2.16 Around 17 per cent and 4 per cent of the households are estimated to be having 1 person and 2 persons wage/salaried in their households respectively at

All India level. In urban areas, about 30 percent of the households are found to be having 1 wage/salaried person in their households.

CHAPTER-III

LABOUR FORCE ESTIMATES

Introduction

3.1 Labour Force indicates the supply of labour in the country and is an important input for production of goods & services in the country. The reliable estimates of labour force are important for policy and planning purposes. The Labour Force Participation Rate derived shows the proportion of a country's working-age population that engages actively in the labour market, either by working or looking/searching for work. It provides an indication of the relative size of the supply of labour available to engage in the production of goods and services. The breakdown of the labour force by sector, sex, State/UT, social group and age group wise gives a profile of the distribution of the economically active population within the country to formulate policies and plans for various target population.

3.2 In our country, the Labour Force Participation Rate for

women is quite low as compared to other developed countries. Based on the experience gained in each round, more and more probing questions for some of the categories of persons especially persons pursuing studies and persons involved in domestic duties are included in the schedule, however, still it is likely that the Labour Force Participation Rate (LFPR) and Worker Population Ratio (WPR) are underestimated due to insufficient probing especially in case of these categories of persons.

3.3 The present chapter deals with the Labour Force Participation Rate, Worker Population Ratio, Unemployment Rate, Proportion unemployed estimates and activities pursued by employed persons based on Usual Principal Status approach and Usual Principal and Subsidiary Status approach. All the estimates derived in the present chapter are for the

persons aged 15 years and above as was compiled in the previous annual employment-unemployment survey reports also.

Concepts of Labour Force

3.4 The basic concepts of important Labour Force parameters are given below:

3.5 Labour Force Participation

Rate: - Labour Force Participation Rate (LFPR) is defined as the number of persons in the labour force per 1000 persons.

$$LFPR = \frac{\text{no. of employed} + \text{no. of unemployed persons}}{\text{Total population}} \times 1000$$

3.6 Worker Population Ratio: -

Worker Population Ratio (WPR) is defined as the number of persons employed per 1000 persons.

$$LFPR = \frac{\text{no. of employed} + \text{no. of unemployed persons}}{\text{Total population}} \times 1000$$

3.7 Proportion Unemployed: -

Proportion Unemployed (PU) is defined as the number of persons unemployed per 1000 persons.

$$PU = \frac{\text{no. of unemployed persons}}{\text{Total population}} \times 1000$$

3.8 Unemployment Rate:-

Unemployment Rate (UR) is

defined as the number of persons unemployed per 1000 persons in the labour force (employed & unemployed).

$$UR = \frac{\text{no. of unemployed persons}}{\text{labour force}} \times 1000$$

Measurement of Labour Force

3.9 In a country where majority of the workers are employed in the unorganized sector and pursuing multiple activities, estimating labour force and its derivatives by a single approach is a difficult task. In such cases no single measure is appropriate to estimate the labour force parameters precisely. As per International practice, Labour Force related parameters can be estimated for both longer reference period and current or shorter reference periods. Accordingly, based on longer reference period, Labour Force related parameters may be derived by the following two different approaches.

i) Usual Principal Status (UPS)

Approach: - The major time criterion based on the 365 days is used to determine the activity pursued by a person under the usual principal

status approach. Accordingly, the major time spent by a person (183 days or more) is used to determine whether the person is in the labour force or out of labour force. A person found unemployed under this approach reflects the chronic unemployment. In the present survey, the usual principal status approach estimates are derived for a moving reference period of last twelve months. For example, if the household is surveyed in January, 2014, the reference period for collection of information is January, 2013-December, 2013.

ii) Usual Principal and Subsidiary Status (UPSS) Approach: - The other important approach to measure the labour force parameters is the usual principal & subsidiary status approach. This approach is a hybrid one which takes into consideration both the major time criterion and shorter time period (30 days or more in any economic activity). Thus a

person who has worked even for 30 days or more in any economic activity during the reference period of last twelve months is considered as employed under this approach. In this approach, the reference period is same as taken in the usual principal status approach (UPS). This approach is also called the usual status approach.

3.10 The results of Labour Force Participation Rate and its derivatives are compiled separately in this report for the first two approaches namely Usual Principal Status (UPS) approach and Usual Principal and Subsidiary Status (UPSS) approach which are based on longer reference period of one year.

Labour Force Participation Rate (LFPR)

3.11 The results of LFPR are presented in the form of proportions for persons aged 15 years & above only. In the previous surveys also, LFPR was estimated for persons aged 15

years and above. The results are compiled for all State/UT's, sector and gender wise in the report. In order to derive the absolute figures, the proportions

may be multiplied with the corresponding population figure of same age-group/sector/gender.

Table 3.1: LFPR based on UPS & UPSS approach for persons aged 15 years & above (in%)

Approach	Rural			Urban			Rural+ Urban		
	M	F	P	M	F	P	M	F	P
UPS	74.7	29.1	54.7	73.8	18.5	47.2	74.4	25.8	52.5
UPSS	76.4	36.4	58.8	74.0	19.7	47.9	75.7	31.1	55.6

3.12 At All India level, the Labour Force Participation Rate (LFPR) based on Usual Principal Status approach is estimated at 52.5 percent or 525 persons out of 1000 persons aged 15 years & above. The gender wise estimates derived shows that 74.4 per cent of the males and 25.8 per cent of the females aged 15 year and above are either working or looking/available for work. The female participation rate is quite low as compared to male counterparts in our country. In many developed countries, the female participation rate is above 50 per cent.

3.13 While analysing sector-wise LFPR estimates, it may be seen from the table that in rural sector the LFPR is estimated to be 54.7 per cent whereas in urban sector the same is at 47.2 per cent at All India level. The major reason of lower LFPR in urban areas is the female participation rate. In rural and urban sector, the male participation rate is almost same at 75 per cent. On the other hand, in rural areas, the female participation rate is 29 per cent whereas in urban counterparts the same is at 18.5 per cent only based on Usual Principal Status Approach.

3.14 Under the UPSS approach, the LFPR at All India level is estimated to be 55.6 per cent. In this approach, the persons employed even for 30 days and above is also taken into consideration and counted as employed. This approach is important to understand the contribution made by the

seasonal workers in the production of goods and services in the country. Many persons categorised as not in labour force or unemployed based on major time criterion are counted as employed under this approach, if they have worked for 30 days and above during the one year reference period.

Figure 1: Labour Force Participation Rate based on UPS and UPSS approach

3.15 While comparing the results of UPSS approach with UPS approach, it may be seen that for male category, the LFPR increased by 1.3 per cent only under the UPSS approach. However, in case of females, the LFPR has increased significantly by 5.3 per cent under the UPSS

approach as compared to UPS approach at All India level. It implies that many females who were primarily not a part of labour force based on major time criterion had worked for few months during the peak season or at the time of availability of work at their place.

3.16 Further probing of the data shows that in case of urban sector, there is slightest increase in the LFPR in both the male and female category. In case of male category, the labour force participation rate has increased by 0.2 per cent whereas for females the participation rate has increased by 1.2 per cent only under the UPSS approach as compared to UPS approach. On the other hand in rural sector, a significant increase in female labour force participation rate is observed under the UPSS approach. The female labour force participation rate has increased by 7.3 per cent under the UPSS approach whereas for

male counterpart the same has increased by 1.7 per cent only.

Worker Population Ratio (WPR)

3.17 The second important parameter of the labour force is the Worker Population Ratio. The WPR signifies the proportion of workers/employed persons in the total population for the specific age group. As stated earlier, all the labour force related parameters are derived for the persons aged 15 years and above. The Worker Population Ratio based on Usual Principal Status approach and Usual Principal and Subsidiary Status approach for persons aged 15 years and above at All India level is given below in Table 3.2.

Table 3.2: Worker Population Ratio based on UPS and UPSS approach for persons aged 15 years & above (in %)

Approach	Rural			Urban			Rural+ Urban		
	M	F	P	M	F	P	M	F	P
UPS	71.6	27.2	52.1	70.9	16.2	44.6	71.4	23.8	49.9
UPSS	74.3	35.1	57.1	71.4	17.5	45.5	73.5	29.6	53.7

3.18 The Worker Population Ratio is estimated to be 49.9 per cent at All India level based on

Usual Principal Status Approach or in other words 50 per cent of persons aged 15 years and above

are employed at All India level based on major time criterion approach. In case of gender wise classification of results, 71.4 per cent of males and 23.8 per cent of female aged 15 years and above are employed at All India level based on UPS approach.

3.19 While comparing the results at sectoral level, it may be seen from the above table that 52.1 per cent of the persons aged 15 years and above are employed in rural sector whereas in urban

sector 44.6 per cent of the persons aged 15 years & above are employed.

3.20 While analyzing the results for UPSS approach, it may be seen from table 3.2 that Worker Population Ratio is estimated at 53.7 per cent at All India level. The gender wise distribution of results shows that 73.5 per cent of males and 29.6 per cent of females aged 15 years and above are employed based on UPSS approach at All India level.

Figure 2: Worker Population Ratio based on UPS and UPSS approach

3.21 At sectoral level, Worker Population Ratio is estimated to be 57.1 per cent and 45.5 per cent in rural and urban sector

respectively under the UPSS approach. While analyzing further disaggregated results, it is observed that a significant

increase in WPR is in female Worker Population Ratio in rural sector under UPSS approach as compared to other variables.

Unemployment Rate (UR)

3.22 The third important parameter of the labour force is the Unemployment Rate. The unemployment rate reflects the portion of the labour force which was available for work during the given reference period but did not get work. The unemployment rate derived based on Usual Principal

Status approach is also sometimes called as “chronic unemployment” as the persons remained unemployed for major part of the period for which they were available. The Unemployment Rate in the present report has been calculated for Usual Principal Status approach and Usual Principal & Subsidiary Status approach. The UR based on UPS and UPSS approaches at All India level is given below in Table 3.3:

Table 3.3: Unemployment Rate based on UPS & UPSS approaches for persons aged 15 years & above at All India level in %

Approach	Rural			Urban			Rural+ Urban		
	M	F	P	M	F	P	M	F	P
UPS	4.2	6.4	4.7	3.9	12.4	5.5	4.1	7.7	4.9
UPSS	2.7	3.4	2.9	3.5	10.8	4.9	2.9	4.9	3.4

3.23 The Unemployment Rate based on Usual Principal Status approach is estimated to be 4.9 per cent at All India level or in other words about 5 per cent of the persons who were available for work during the reference period could not get work and remain unemployed. The

Unemployment Rate in case of female category is almost double as compared to male counterparts. The Unemployment Rate for male category is 4.1 per cent whereas for female category, it is 7.7 per cent at All India level based on Usual Principal Status approach.

Figure 3: Unemployment Rate based on UPS & UPSS approach

3.24 While analyzing the results at sectoral level under the Usual Principal Status approach, the survey result reveals that in rural sector, the unemployment rate is 4.7 per cent whereas in urban sector, the same is 5.5 per cent at All India level. In case of females in urban sector, the unemployment rate is significantly high at 12.4 per cent at All India level.

3.25 The Unemployment Rate based on Usual Principal & Subsidiary Status approach is estimated to be 3.4 per cent at All India level. In case of male category, the unemployment rate is 2.9 per cent whereas for female group, the same is 4.9 per cent

which is one & half as compared to male category at All India level. While analyzing the results at sectoral level, the unemployment rate in rural sector is estimated to be 2.9 per cent whereas in urban sector, it is 4.9 per cent at All India level.

Proportion Unemployed (PU)

3.26 The other important parameter under the labour force is proportion unemployed. As discussed earlier, it is defined as a proportion of unemployed persons in the total population, whereas unemployment rate is defined as a proportion of unemployed persons in the labour force. The Proportion Unemployed has been derived for

Usual Principal Status approach and Usual Principal & Subsidiary Status approach in this report.

The PU based on these two approaches is given below in Table 3.4

Table 3.4: Proportion Unemployed based on UPS & UPSS approaches for persons aged 15 years & above at All India level (in %)

Approach	Rural			Urban			Rural+ Urban		
	M	F	P	M	F	P	M	F	P
UPS	3.1	1.9	2.6	2.9	2.3	2.6	3.0	2.0	2.6
UPSS	2.1	1.2	1.7	2.6	2.1	2.4	2.2	1.5	1.9

3.27 The Proportion Unemployed based on Usual Principal Status approach is estimated to be 2.6 per cent at All India level. In case of male category, the PU is 3.0

per cent whereas for female category the same is 2.0 per cent. At sectoral level, the PU is 2.6 per cent in both rural and urban sector.

Figure 4: Proportion Unemployed based on UPS & UPSS approach

Activity-wise distribution of the population

3.28 The persons aged 15 years and above are classified based on

various activities pursued by them during a longer reference period of one year. The

workers/employed persons are also classified based on the economic activity pursued by them on the basis of National Industrial Classification 2008 (NIC 2008) at the section level. The workers or employed persons are also classified among occupations on the basis of National Classification of Occupations (NCO 2004).

Activity-wise distribution of persons

3.29 Based on the Usual Principal Status approach, the main activities pursued by the persons are as follows:

- i) worked in household enterprise as an own account worker;
- ii) worked in household enterprise as an employer;

- iii) worked as helper in household enterprise (unpaid family worker);
- iv) worked as permanent regular salaried/ wage employee;
- v) worked as contract worker;
- vi) worked as casual wage labour in public works;
- vii) worked as casual wage labour in other types of work;
- viii) did not work but was seeking and/or available for work;
- ix) attended educational institution;
- x) attended domestic duties only;
- xi) rentiers, pensioners, remittance recipients, etc.;
- xii) not able to work due to disability;
- xiii) others (begging, prostitution, etc.).

3.30 The classification as mentioned above from sr. no. (i) to (viii) belongs to the labour force and remaining from sr. no. (ix) to (xiii) belongs to the non-labour force category under the Usual Principal Status approach.

Table 3.5: Distribution of employed persons among different categories of employment based on UPS & UPSS approach (in %)

Approach	<i>Rural+ Urban</i>			
	Self employed	Wage/salary earners	Contract worker	Casual labour
UPS	49.5	16.5	3.0	30.9
UPSS	50.5	15.4	2.9	31.1

3.31 The survey results show that majority of the persons are self employed. About 50 per cent

of the employed persons are reported to be self employed followed by 31 per cent as casual

labour, 17 per cent as wage/salary earners and remaining 3 per cent as contract workers based on Usual Principal Status approach. Under the Usual Principal & Subsidiary Status approach also same pattern as observed in UPS approach is visible. The distribution of employed persons by categories of employment, namely, self employed, wage/salary earners, contract workers and casual labour based on UPS & UPSS approach is presented in Table 3.5.

3.32 While analyzing the results at gender level, the survey results

reveal that for male category of persons, self employment is the dominant category in which majority of the male persons are employed. Under the self employment category, 50.5 per cent of the male persons are employed followed by 29.2 per cent under the casual labour, 16.9 per cent under wage/salary earners and remaining 3.3 per cent as contract workers based on Usual Principal Status approach. The distribution of employed persons for male category based on UPS and UPSS classification is given below in Table 3.6.

Figure 5: Distribution of Employed persons by various activities under UPS approach

Table 3.6: Distribution of employed persons (male) among different categories of employment based on UPS & UPSS approach (in %)

Rural+ Urban (male)

Approach	Self employed	Wage/salary earners	Contract worker	Casual labour
UPS	50.5	16.9	3.3	29.2
UPSS	51.0	16.5	3.2	29.3

3.33 In case of female category also, self employment is the main contributor in the employment. At All India level, 45.7 per cent of female work force is employed under self employed category followed by 37.2 per cent under casual labour, 15.0 per cent as

wage/salary earners and remaining 2.2 per cent as a contract worker based on Usual Principal Status approach. The distribution of female employed persons based on UPS and UPSS classification is given below in Table 3.7.

Table 3.7: Distribution of employed persons (female) among different categories of employment based on UPS & UPSS approach (in %)

Rural+ Urban (female)

Approach	Self employed	Wage/salary earners	Contract worker	Casual labour
UPS	45.7	15.0	2.2	37.2
UPSS	49.1	12.1	2.0	36.8

Industry wise distribution of workers

3.34 The employed persons are further classified based on the economic activity pursued by them in different industry sections. The results are compiled based on National Industrial Classification 2008. The results at State/UT level are compiled at section level (A-U) of

NIC 2008 classification. However, at All India level, the survey results are presented at 2 digit level of NIC 2008 classification.

3.35 The survey results reveal that under UPS approach, majority of the persons are employed in primary sector i.e agriculture, forestry & fishing

and mining & quarrying or Section A & Section B of NIC 2008 classification. In the primary sector, 46.9 per cent workers are estimated to be employed followed by 30.9 per cent in the tertiary sector and

remaining 22.2 per cent in the secondary sector i.e. manufacturing and construction sector (Section C and Section F) based on Usual Principal Status approach (Table 3.8).

Table 3.8: Sector wise distribution of employed persons based on NIC 2008 classification (in %)

<i>Rural + Urban</i>			
Approach	Primary sector	Secondary sector	Tertiary sector
UPS	46.9	22.2	30.9
UPSS	48.3	22.4	29.3

3.36 It may be observed from the above table that similar trend is followed under Usual Principal & Subsidiary Status approach.

3.37 The distribution of employed persons based on NIC 2008 classification in rural sector is presented in Table 3.9. The

survey results reveal that 60.8 per cent of the employed persons are engaged in primary sector, followed by 20 per cent in tertiary sector and remaining 19.2 per cent in secondary sector based on Usual Principal Status approach.

Table 3.9: Sector wise distribution of employed persons in rural sector based on NIC 2008 classification (in %)

<i>Rural</i>			
Approach	Primary sector	Secondary	Tertiary sector
UPS	60.8	19.2	20.0
UPSS	61.6	19.6	18.8

3.38 In the urban sector, majority of the employed persons

are in tertiary sector. Based on Usual Principal Status approach,

61.4 per cent of the employed persons are in tertiary sector, followed by 30.4 per cent in

secondary sector and remaining 8.2 per cent in primary sector.

Table 3.10: Sector wise distribution of employed persons in urban sector based on NIC 2008 classification (in %)

<i>Urban</i>			
Approach	Primary sector	Secondary sector	Tertiary sector
UPS	8.2	30.4	61.4
UPSS	8.4	30.6	61.0

3.39 In order to find out whether the persons available for 12 months during the reference period are fully employed or partially employed, special tables have been generated in this report. The persons who were available for 12 months during the reference period are categorized into following four

groups based on Usual Principal & Subsidiary Status approach.

- i) Worked for 12 months or fully employed
- ii) Worked for 6-11 months (partially employed)
- iii) Worked for 1-5 months (partially employed)
- iv) did not get any work and remained unemployed throughout the year.

Table 3.11: Percentage distribution of persons available for 12 months based on UPSS approach (in %)

Group	Rural	Urban	Rural + Urban
Worked for 12 months	53.2	78.5	60.5
Worked for 6-11 months	42.2	16.3	34.7
Worked for 1-5 months	1.4	0.4	1.1
Did not get any work	3.2	4.8	3.7

3.40 The survey results reveal that 60.5 per cent of the persons who were available for 12 months were able to get the work throughout the year at All India level as presented in Table 3.11. In rural areas, the picture is quite gloomy as compared to urban areas, as only 53.2 per cent of the persons who were

available for 12 months were able to get work for 12 months. About 4 per cent of the persons who were available for work throughout the year could not get any work at All India level. The results have been compiled at State/UT, gender and sectoral level and are at Annexure IV.

CONCEPTS AND DEFINITIONS

Important concepts and definitions used in the survey and relevant to this report are explained below.

1.1 House: Every structure, tent or other place of shelter, etc. which is used primarily for residential use is considered as a house for the present survey.

1.2 Household: A group of persons normally living together and taking food from a common kitchen constitutes a household. It will include temporary stay-aways (those whose total period of absence from the household is expected to be less than 6 months) but exclude temporary visitors and guests (expected total period of stay less than 6 months). The members of a household may or may not be related by blood or marriage to one another. The following examples may be useful while determining the group of persons to be considered as households:

- (a) In case a hostel is listed, it will constitute a single household.
- (b) Inmates of hotel, lodging and boarding house etc. will also constitute a single household.
- (c) In deciding the composition of a household, more emphasis is to be placed on 'normally living together' than on ordinarily taking food from a common kitchen. In case the place of residence of a person is different from the place of boarding, he or she will be treated as a member of the household in which he or she resides.
- (d) A resident employee, or domestic servant or a paying guest will be considered as a member of the household in which he or she resides even though he or she is not a member of the same family if the period of stay is six month or above.
- (e) In case a member of a family (say a son or a daughter of the head of family) stays elsewhere like in hostel for studies or for any other reason for major part of the year, he/she will not be considered as a member of his/her parents household.

1.3 Household size: The number of members normally residing in a household is its size.

1.4 Economic activity: The entire spectrum of human activity falls into two categories: i) economic activity and ii) non-economic activity. Any activity that results in production of goods and services which adds value to the national product is considered as an economic activity. Further the economic activities have two parts namely i) market activities and ii) non-market activities. Market activities are those that involve remuneration to those who perform it, i.e., activity performed for pay or profit. Such activities include production of all goods and services for market including those of government services, etc. On the other hand non-market activities are those involving the production of primary commodities for own consumption and own account production of fixed assets.

1.5 Thus the term 'economic activity' under the fourth Annual Employment and Unemployment survey includes:

- i. All the market activities described above, i.e., the activities performed for pay or profit which result in production

of goods and services for exchange,

- ii. Of the non-market activities,
 - a) All the activities relating to the primary sector which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption.
 - b) The activities relating to the own-account production of fixed assets. Own account production of fixed assets include construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labour or a supervisor.

1.6 Activity status: It is the activity in which a person is engaged during the reference period, which in turn decides the person's participation in economic and /or non-economic activities. According to this, a person will be in one or a combination of the

following three statuses during a reference period:

- i. Working or engaged in economic activity (work);
- ii. Not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' in case the 'work' is available and
- iii. Neither engaged in any economic activity (work) nor available for 'work'.

1.7 Activity statuses mentioned against sl. no. (i) & (ii) above, are associated with 'being in labour force' and the last sl.no. (iii) is associated with 'not being in the labour force'. Being in labour force is further categorized into two parts (i) employed and unemployed.

1.8 The three broad activity statuses have been further sub-divided into the following categories as listed below:

- i. working or being engaged in economic activity (employed):
 - a) worked as an own-account worker (self-employed);
 - b) employer (self-employed);
 - c) worked in household enterprise as 'helper' (unpaid family worker);

d) worked as regular salaried/wage employee other than contract worker;

e) worked as contract worker;

f) worked as casual wage labour in public works;

g) worked as casual wage labour in other types of works;

ii. not working but seeking or available for work (unemployed);

iii. neither working nor available for work (not in labour force)

i) attended educational institution;

ii) attended domestic duties;

iii) recipients of rent, pension, remittance, etc;

iv) not able to work due to disability;

v) Others (prostitutes, beggars, etc.);

1.9 The various concepts like, 'workers', 'unemployed', labour force, out of labour force are as explained below:

1.10 Workers (or employed):

Persons who during the reference period are engaged in any economic activity or who, despite their attachment to their economic activity, have temporarily abstained from work, for reasons of illness, injury or other physical

disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work constitute workers. Unpaid helpers who assist in the operation of an economic activity in the household, farm or non-farm activities are also considered as workers.

1.11 Seeking or available for work (or unemployed): Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing condition of work and remuneration are considered as those who are 'seeking or available for work' (or unemployed).

1.12 Labour force: Persons who are either 'working' (employed) or 'seeking or available for work' (unemployed) or both during a major part of the reference period, constitute the labour force.

1.13 Out of labour force: Persons who are neither 'working' and at the same time nor 'seeking or available for work' for various reasons during the major part of

the reference period are considered to be 'out of the labour force'. The persons under this category includes students, persons engaged in domestic duties, rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young or too old persons, beggars, prostitutes, etc.

1.14 It may be noted that workers have been further categorized as self-employed, regular salaried/wage employee and casual wage labour. The details of these categories are defined in the following paragraphs.

1.15 Self-employed: Persons who operate their own farm or non-farm enterprises or are engaged independently in a profession or trade on own-account or with one or a few partners are considered as self-employed. The essential feature of the self-employed is that they have autonomy (i.e., regarding how, where and when to produce) and economic independence (i.e. regarding market, scale of operation and money) for carrying out operation. The fee or remuneration received by them consists of two parts - the share of their labour and profit of the enterprise. In other words, their

remuneration is determined wholly or mainly by sales or profits of the goods or services which are produced.

1.16 The self-employed persons may again be categorized into the following groups:

- i) **Own-account workers:** The self-employed persons, who operate their enterprises on their own account or with one or a few partners and who during the reference period by and large, run their enterprises without hiring any labour are called as own account workers. They may, however, have unpaid helpers to assist them in the activity of the enterprise.
- ii) **Employers:** The self-employed persons who work on their own account or with one or a few partners and by and large run their enterprises by hiring labour are considered as the employers.
- iii) **Helpers in household enterprise:** The helpers are a category of self-employed persons, mostly family members, who keep themselves engaged in their household enterprises, working full or part time and do not receive

any regular salary or wages in return for the work performed. They do not run the household enterprise on their own but assist the related person living in the same household in running the household enterprise.

1.17 Regular salaried/wage employee other than contract workers: Persons working in others farm or non-farm enterprises (both household and non-household) and getting in return salary or wages on a regular basis (and not on the basis of daily or periodic renewal of work contract) are the regular salaried/wage employees. The category not only includes persons getting time-rate wage but also persons receiving piece-rate wage or salary and paid apprentices, both full time and part-time.

1.18 Worked on contract basis: As per the definition of contract worker, a worker is deemed to be employed as contract worker when he/she is hired in connection with the work of an establishment by or through a contractor. Contract workmen are indirect employees; persons who are hired, supervised and remunerated by a contractor who, in turn, is compensated by the establishment. For the purpose

of present survey, in addition to the above mentioned category of workers, the term contract workers includes workers whose work are governed by a contract agreement either in writing or oral directly by the establishment. More precisely, the workers hired by the establishment directly for a specific job and for a specified period will also be categorized under the contract category of workers.

1.19 Casual wage labour: A person casually engaged in others farm or non-farm enterprises (both household and non-household) and getting in return wage according to the terms of the daily or periodic work contract is a casual wage labour. Usually in the rural areas, a type of casual labourers can be seen who normally engage themselves in 'public works' activities. 'Public works' are those activities which are sponsored by the Government or local bodies for construction of roads, digging of ponds, etc. as relief measures (like flood relief, drought relief, famine relief, etc.) and also under various employment generation schemes under poverty alleviation programmes.

1.20 Different approaches for determining activity status: The persons surveyed can be classified into various activity categories on the basis of activities pursued by them during certain specified reference periods. There could be three reference periods viz. (i) one year, (ii) one week and (iii) each day of the reference week. Based on these three reference periods, three different measures of activity status are arrived at. These are termed respectively as usual principal status, current weekly status and current daily status. The activity status determined on the basis of a reference period of one year is known as the usual principal activity status of the person, that determined on the basis of a reference period of 1 week is known as the current weekly status (CWS) of the person and the activity status determined on the basis of a reference period of one day is known as the current daily status (CDS) of the person. In this report, the labour force related parameters are estimated for a reference period of one year.

1.21 Usual activity status: The usual activity status relates to the activity status of a person during the last completed twelve months from the date of survey. The

activity in which a person spent relatively longer time (major time criterion) during the reference period is considered as the usual principal activity of the person. To decide the usual principal activity of a person, he/she is first categorized as belonging to the labour force or not during the reference period on the basis of major time criterion. Persons, thus adjudged as not belonging to the labour force are assigned the broad activity status 'neither working nor available for work'.

1.22 For the persons belonging to the labour force, the broad activity status of either 'working' or 'not working but available for work and/or seeking work' is then ascertained again on the basis of the relatively longer time spent during the period in the labour force. Within the broad activity

status so determined, the detailed activity status category of a person pursuing more than one such activity will be determined again on the basis of the relatively longer time spent.

1.23 Subsidiary economic

activity status: A person whose usual principal status is determined on the basis of the major time criterion may have pursued some other economic activity for 30 days or more during the reference period. The status in which such economic activity is pursued during the reference period is the subsidiary economic activity status of the person. In case of multiple subsidiary economic activities, subsidiary activity will be determined on the basis of relatively longer time spent criterion.

SAMPLING DESIGN & ESTIMATION PROCEDURE

Introduction

Labour Bureau has been entrusted with the task of conducting Annual Employment-Unemployment Surveys in the country. The objective of this annual survey is to regularly make available the basic inputs on labour force related parameters to facilitate policy formulation/review. The first such Annual Household Employment-Unemployment survey for the period 2009-10 was conducted during the year 2010. Till so far three such surveys have been conducted and thereon reports released. The present one is the Fourth Annual Employment-Unemployment Survey in the series.

2.4 In the current survey, a moving reference period is used to determine the usual status activity of the persons. The survey has been conducted in all the States/UTs by covering all the districts in the country. The field work of the present survey was launched in January, 2014 and completed in majority of the States/UTs by June, 2014. A

sample of about 1.36 lakh household schedules has been covered during the survey in 36 States/UTs.

2.5 Sample Design: A stratified multi-stage sample design has been adopted for the Fourth Annual Household Employment-Unemployment Survey. The first stage units (FSU) for rural sector are the 2011 census villages in all the States/UTs, except Kerala State, where panchayat wards are the FSUs. In case of urban sector, the latest available Urban Frame Survey (UFS) blocks for the period 2007-12 prepared by National Sample Survey Office are the First stage units.

2.6 Stratification: Each district of a State/UT has been divided into two strata: i) rural stratum comprising of all the rural areas of the district and ii) urban stratum comprising of all the urban areas of the district.

2.7 Sample Size: In all 36 States/UTs, a total sample of

12598 First Stage Units (FSUs) is allocated at All India level keeping in view the resource availability and other logistics. Broadly considering the population proportion, a sample of 7270 FSUs is allocated to rural sector in all the 36 States/UTs, while rest 5328 FSUs are allocated in the urban sector. While allocating the sample, additional weight age is given to the urban sector as compared to rural sector; so that the urban areas are not under represented in the survey on the basis of proportional allocation, with the condition that in major states the total sample size in urban sector does not exceed that of the rural sector.

2.8 Allocation of Sample to States/UTs: Distribution of total number of sample FSUs in rural sector among the States/UTs is done in proportion to their respective rural population as per 2011 census, subject to a minimum sample allocation to each State/UT. For urban sector, the sample FSUs are allocated among the 36 States/UTs in proportion to the UFS blocks for the period 2007-12. A minimum sample size in a State/UT is allocated at 16 FSUs with a

minimum of 8 each in rural and urban areas.

2.9 Allocation of State/UT level rural and Urban Stratum sample to districts: The State/UT level rural/ urban sample is further distributed among its districts in proportion to rural/ urban population/urban frame survey blocks. A minimum of 16 FSUs are allocated to each State/UT for rural and urban areas combined. Stratum level sample is adjusted to multiple of 4 FSUs with a minimum sample size of 4 FSUs in a stratum. In case of some North Eastern States and UTs a marginal increase in sample size is done due to their under representation in overall sample because of their lower population.

2.10 Selection of FSUs: For the rural stratum, the village lists based on 2011 census frame are taken in the same order and the required sample is drawn by using circular systematic sampling technique with probability proportional to size (size being the population of the village as per Census 2011). In case of urban stratum, the UFS blocks are arranged in ascending order based on the town variable. After

arranging UFS blocks, sample is drawn by circular systematic sampling. This arrangement is done to ensure that most of the towns are represented in the sample. In both, the rural and the urban strata, samples are drawn in the form of two independent sub-samples.

2.11 Criteria for hamlet group/sub block formation: Large FSUs having approximate present population of 1200 or more are divided into a suitable number (say, D) of 'hamlet-groups'(hg) in the rural sector and 'sub-blocks'(sb) in the urban sector as stated below.

Approximate present population of the sample village/ urban block	No. of hg/sb to be formed (d)
Less than 1200 (no hamlet-group/sub block)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
.....and so on	

2.12 For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except Dehradun plains, Nainital Plains, Haridwar and Udham Singh Nagar), Poonch, Rajouri,

Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu & Kashmir and Idukki district of Kerala, the number of hamlet groups are formed as follows:

Approximate present population of the sample village/ block	No. of hgs/ sbs to be formed (d)
Less than 600 (no hamlet-groups/sub blocks)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
.....and so on	

2.13 Selection of hamlet groups/sub blocks:

In case of large village/UFS block wherever hamlet-groups/sub-blocks have been formed, two hamlet-groups/sub-blocks are selected. The procedure to select the hg/sb is as follows:

- i) The hg/sb with maximum percentage share of population will always be selected and termed as hg/sb 1.
- ii) Second hg/sb will be selected from the remaining hgs/sbs by simple random sampling and termed as hg/sb 2.

Listing and selection of the households will be done independently in the two selected hamlet-groups/sub-blocks. In case hamlet-groups/sub-blocks is formed in a sample FSU, it is ensured that the hamlet-groups/sub-blocks formed are clearly identifiable in terms of physical landmarks. The FSU without hg/sb formation will be treated as sample hg/sb number 1.

2.14 Listing of households: After determining the hamlet-groups/sub-blocks i.e. areas to be considered for listing, all the

households in that area will be listed (including those found to be temporarily locked after ascertaining the temporariness of locking of households through local people). The hamlet-group/sub-block with sample hg/sb number 1 will be listed first and that with sample hg/sb number 2 will be listed next.

Formation of Second Stage Strata and allocation of households:

2.15 For canvassing the schedules, all the households listed in selected FSU/ hamlet-groups/ sub-blocks are to be stratified into four second stage strata (SSS) as given below:

The second-stage-strata in the rural and urban stratum will be formed based on the number of persons in a household aged 15 years and above. The four second-stage-strata (SSS) in the rural and urban strata are formed in the following order:

2.16 Allocation of households:

The number of households to be surveyed (h) in each second stage stratum in the sample FSUs is as follows:

Second Stage Strata (SSS)	No. of members in the household aged 15 years & above
SSS1	1
SSS2	2-3
SSS3	4-5
SSS4	6 & more

SSS	without hg/sb formation		with hg/sb formation in both rural & urban strata	
	Rural	Urban	hg1/sb1	hg2/sb2
h1	1	1	1	1
h2	2	3	2	2
h3	4	4	2	2
h4	3	2	1	1
Total	10	10	6	6

2.17 Selection of Households:

From each Second Stage Strata the sample households are selected by simple random sampling without replacement.

2.18 Shortfall of households to be compensated:

Shortfall of households in the frame of any particular SSS will be compensated from the same SSS of the other hg/sb or from the other SSS of the same or other hg/sb where additional household(s) are available. The procedure is as follows:

Step 1: Allocate the required number of households to each SSS wherever possible and identify the SSS having shortfall.

Step 2: In case of hg/sb formation, compensate from the same SSS of the other hg/sb, if available. Otherwise, go to Step 3.

Step 3: Find the SSS where additional households are available following the priority order of SSS 1, SSS 2, SSS 3 & SSS 4 and compensate.

2.19 The table given below may be useful for deciding the SSS from

which the compensation is to be made.

SSS having shortfall	priority order of SSS for compensation
1	2, 3, 4
2	1, 3, 4
3	1, 2, 4
4	1, 2, 3

2.20 If there is hg/sb formation, for each SSS as per priority order, compensation may be made from the hg/sb where shortfall occurs, failing which from other hg/sb and so on.

2.21 For example, if shortfall is in SSS 3 of hg/sb 1, first try to compensate from SSS3 of hg/sb 2,

failing which try from SSS 1 of hg/sb 1, failing which try from SSS 1 of hg/sb 2. If the shortfall still remains then try from SSS 2 of hg/sb 1, failing which try from SSS 2 of hg/ sb 2. If the shortfall still remains then try from SSS 4 of hg/sb 1, failing which try from SSS 4 of hg/ sb 2.

Estimation Procedure

t = subscript for t-th stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU (village/panchayat ward/ UFS block)

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/hg/sb (j = 1,2,3,4)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/ sb's formed in the sample FSU

D* = 1 if D = 1

= D-1 for FSUs with D > 1

N = total number of FSUs in any urban stratum

Z = total size of a rural stratum

z = size of selected sample village

n = number of sample FSUs surveyed in a stratum

H = total number of households listed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

h = number of households surveyed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

x, y = observed value of characteristics x, y under estimation

\bar{X}, \bar{Y} = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

y_{tmidjk} = observed value of the characteristic y for the k -th household in the j -th second stage stratum of the d -th hg/ sb ($d = 1, 2$) of the i -th FSU belonging to the m -th sub-sample for the t -th stratum.

Formulae for Estimation of Aggregates for a stratum in a district (rural & urban)

Listing Schedule 'A'

Rural stratum: For estimating the number of households possessing a characteristic

$$\hat{Y} = \frac{Z}{n} \sum_{i=1}^n \frac{1}{z_i} \{y_{i1} + D_i^* y_{i2}\}$$

Where y_{i1}, y_{i2} are the total number of households possessing the characteristic y in hg's 1 & 2 of the i -th FSU respectively.

Urban Stratum: For estimating the number of households possessing a characteristic in the urban stratum of a district.

$$\hat{Y} = \frac{N}{n} \sum_{i=1}^n \{y_{i1} + D_i^* y_{i2}\}$$

Where y_{i1}, y_{i2} are the total number of households possessing the characteristic y in sub-blocks 1 & 2 of i -th FSU respectively.

Schedule 'B': (Employment – Unemployment Survey Schedule)

Estimation formula for a rural stratum in a district:

Rural:

$$\hat{Y} = \sum_{j=1}^4 \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left\{ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right\}$$

Estimation formula for an urban stratum in a District:

$$\hat{Y} = \sum_{j=1}^4 \frac{N}{n_j} \sum_{i=1}^{n_j} \left\{ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right\}$$

Overall Estimate for Aggregates:

Overall estimate for aggregates for a stratum (\hat{Y}_t) based on two sub-samples is obtained as:

$$\hat{Y}_t = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{tm}$$

Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_t over all strata belonging to the State/ UT/ All-India.

Annexure-III

Table (A1): Census Population as on 1st March 2011, percentage decadal change in population of aged 15 years and above between census 2001 and 2011 and projected population as on 1st March 2014 for each State/UT and All-India.

Name of State/UT/All India	Rural			Urban			Male
	Census Population as on 1st March 2011	Percentage Decadal Change in Population Between Census 2001 and 2011 (15 years & above)	Projected Population as on 1st March 2014	Census Population as on 1st March 2011	Percentage Decadal Change in Population Between Census 2001 and 2011 (15 years & above)	Projected Population as on 1st March 2014

Note: 1. Population and Percentage decadal change in population aged 15 years and above were calculated using Table C13 of Census 2001 and 2011.

2. For any category of persons of any State/UT/All-India, Projected population as on 1st March 2014 has been derived using the formula. $A=A1*[1+(R/100)]^{(36/120)}$, where A1 is the census population as on 1st March 2011, R is the percentage decadal change in population between 2001 and 2011 and A is the projected population as on 1st March 2014.

Table (A2): Census Population as on 1st March 2011, percentage decadal change in population of aged 15 years and above between census 2001 and 2011 and projected population as on 1st March 2014 for each State/UT and All-India.

Name of State/UT/All India	Female					
	Rural			Urban

Director General, Labour Bureau

.....about the Labour Bureau

An apex organization for providing data base at the national level for policy formulation, evaluation and research, the Labour Bureau in the Union Ministry of Labour and Employment is the epicenter of all activities involving planning, collection and dissemination of data on various facets of Labour which forms a sound basis for decision making in the Government, industry and by various other user organizations/individuals. Labour Bureau is a store house of important economic indicators like the Consumer Price Index Numbers for industrial and agricultural workers, wage rates, industrial relations, socio-economic conditions in un-organized sector, evaluation and review of working of labour legislations in the country and the like. Labour Bureau has been providing an uninterrupted service to the national and international fora like ILO for the last fifty years. Today, it has assumed an important role in the labour matters and has acquired an un-disputed and indispensable status in the field of labour statistics. Equipped with the expertise of conducting surveys at the national/regional level in diverse fields and in providing in-depth analysis, the organization continues in its pursuit of excellence.
